

SEMPERVIVUM HEUFFELII
'IRENE'

IDEAL LIGHT

Full sun with shade in the afternoon, or light shade through the day

WINTER HARDINESS

Cold hardy to -30F

PROPAGATION METHODS

Cuttings, offsets

WATER NEEDS

Water only when soil is dry - sensitive to over watering

MATURE SIZE

Rosettes are generally 4" (10cm) diameter

ADDITIONAL NOTES

These evergreen monocarpic Sempervivums grow in beautiful, deep purple clusters and have touches of green on the edges. Its thick leaves sustain it through long periods of drought.

They are also deer resistant, so planting them beside other prized plants can help deter them from being eaten.
