## 1.3a: Solving Equations

## Translating Verbal Expressions and Algebraic Expressions

## Ex\#1:

a) Please translate the verbal expressions into an algebraic expressions. three times the difference of a number and eight
the cube of a number increased by 4 times the same number
b) Please translate the algebraic expression into a verbal expression.

$$
p^{3}+4 p
$$

Ex\#2: Please write a verbal sentence to represent the equation.

$$
2 c=c^{2}-4
$$

Properties of Equality - common math operations, used to solve equations

| For any real numbers, $a, b$, and $c$ |  |  |
| :---: | :---: | :---: |
| Property | Using only symbols | Additional examples |
| Reflexive | $\mathrm{a}=\mathrm{a}$ | $b+8=b+8$ |
| Symmetric | If $\mathrm{a}=\mathrm{b}$, then $\mathrm{b}=\mathrm{a}$ | $\begin{array}{ll} \text { If } & 2 b+c=20, \\ \text { Then } & 20=2 b+c \\ \hline \end{array}$ |
| Transitive | If $a=b$, and $b=c$, then $\mathrm{a}=\mathrm{c}$ | $\begin{array}{lr} \text { If } & 2 a+12=30, \\ \text { and } & 30=5 c-8, \\ \text { then } & 2 a+12=5 c-8 \end{array}$ |
| Substitution | If $a=b$, then $a$ can be replaced by $b$ $b$ can be replaced by $a$ | If $\quad(5+2) x=21$, Then $7 x=21$ |

Ex\#3: Please name the property illustrated by the following statement.
If $-11 a+2=-3 a$, then $-3 a=-11 a+2$

## Additional Properties of Equality

"Whatever operation you do to one side of the equation, you must do to the other."

| For any real number 'a' |  |  |
| :---: | :---: | :---: |
| Property |  | Example |
| Addition | if then | $\begin{aligned} a & =a \\ a+8 & =a+8 \end{aligned}$ |
| Subtraction | if then | $\begin{aligned} a & =a \\ a-4 & =a-4 \end{aligned}$ |
| Multiplication | if then | $\begin{aligned} a & =a \\ a \cdot 3 & =a \cdot 3 \end{aligned}$ |
| Division | if then | $\begin{aligned} a & =a \\ a \div 7 & =a \div 7 \end{aligned}$ |

Ex\#4: Please solve the following equations, noting which property of equality is being utilized.
a) $x-14.29=25$
b) $\frac{2}{3} y=-18$
c) $\quad-10 x+3(4 x-2)=6$

Ex\#5: Please solve for $h$ in the following formula for area of a trapezoid. $A=\frac{1}{2} h\left(b_{1}+b_{2}\right)$ Please note the property used for each step.
