

CRASSULA FALCATA
“PROPELLER PLANT”

IDEAL LIGHT

Grows well indoors under bright light

WINTER HARDINESS

Not cold hardy

PROPAGATION METHODS

Leaves, cuttings, and offsets

WATER NEEDS

Water only when soil is dry

MATURE SIZE

9 inches tall | 12 inches wide

ADDITIONAL NOTES

This gray green succulent has leaves shaped like, you guessed it... a propeller!

It always provides a nice contrast when planted with other succulents. It is easily propagated, and is one of the few succulents that grow well indoors.

It turns more gray than green with bright sun. It should be brought indoors when temperatures drop and threaten frost, as this succulent is not cold hardy.
