Word Count Challenge

Goal

Using the starter app, create code that will loop through the strings and identify the total character count (count line returns as 1), the number of characters excluding whitespace and line returns, and the number of words in the string. Finally, list each word, ensuring it is a valid word.

Bonus

Identify the unique word list, the most used word, the unique character list (just alpha characters), and the most used character.

"Practice makes the master."
