DateTime Challenge

Goal

Capture a date from the console and calculate how many days ago it was. Then capture a time from the console and calculate how many hours and minutes ago it was (assume less than now and not previous day).

Bonus

For times, allow the user to choose to specify 12- or 24-hour format. For dates, allow the user to specify month/day/year or day/month/year format based upon their choice. Also, don't assume times are not the previous day.

"Practice makes the master."
