## No Conflict of Interest Statement

This journal requires that all work be accompanied by a statement

synapses at 10 Hz and 20 Hz (cross symbol). Note the quick recovery of the cortical input onto MSNs (asterisk symbol).

**Figure 4:** *NMDA / AMPA receptor ratio at CL, Pf and cortical synapses on MSNs*

Postsynaptic excitatory currents were recorded from MSN held at +40 mV to reveal both AMPA receptor and NMDA receptor-mediated currents or just AMPA receptor-mediated currents in the presence of D-AP5. Each excitatory input has a distinct ratio of currents mediated by either receptor type. CL synapses on MSNs exhibit predominant AMPA receptor-mediated currents. Pf synapses on MSNs

## Data not cited

This journal requires authors to publish their data in a repository. This should then be cited, using a DOI, in a data access statement with an accompanying entry in your reference section.

You can read more about how to publish and cite your data [here](#).

## Data citation

Your data should be cited on the title page under a section called “**Data Access Statement**”.

## Data citation

Your data should be cited in the **body of your article** near the statistics and figures associated with it.

## Data citation

Your **funder** requires you to publish your data in a repository and cite it in your article.
