

Java GUI Programming

AWT/SWING - Introduction

DESIGN FRAMEWORKS (AWT, SWT, SWING, JAVAFX, QT JAMBI)

ERIC Y. CHOU, PH.D.

IEEE SENIOR MEMBER

What is a GUI Framework?

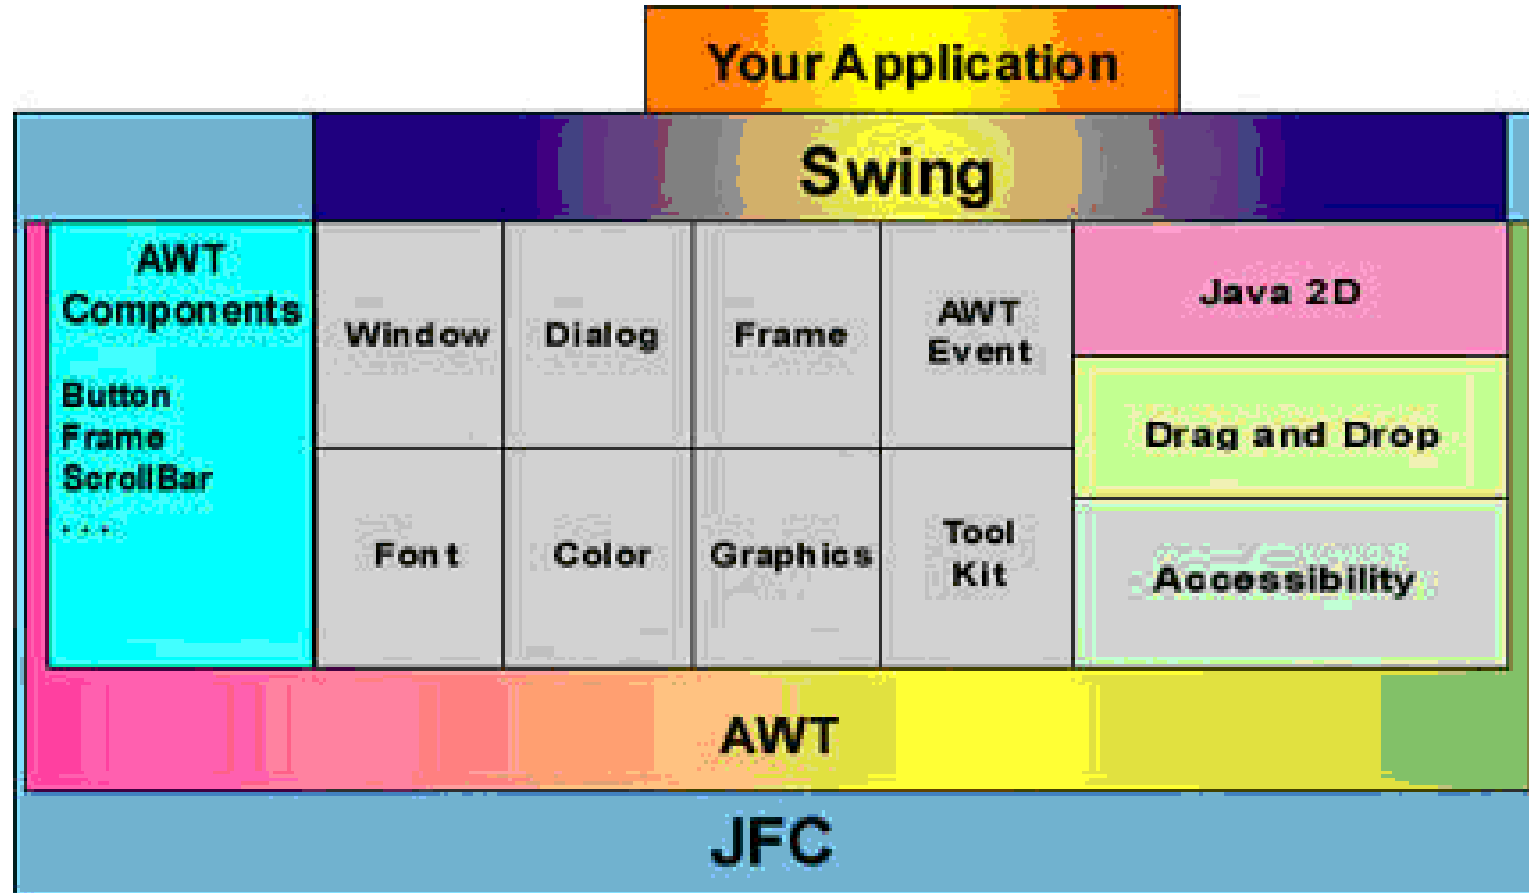

In computer programming, a **software framework** is an abstraction in which software providing generic functionality can be selectively changed by additional user-written code, thus providing application-specific software. A **software framework** is a universal, reusable software environment that provides particular functionality as part of a larger software platform to facilitate development of software applications, products and solutions.

Software frameworks may include support programs, compilers, code libraries, tool sets, and application programming interfaces (**APIs**) that bring together all the different components to enable development of a project or system.

Why Study Java Foundation Class?

It is the foundation for GUI Programming.

- There are many existing projects.
- Knowledge in JFC (AWT+Swing) can be used in all different GUI frameworks.
- Compatible with JavaFX and Android Studio.
- More educational resources.
- Foundation to study Networking, Database, Unit Testing, Multimedia, and Web Servers
