

- [Instructor] In order to successfully submit an app to the Google Play Store, you should have the following items at hand. The login credentials for your Google Developer account and a built and tested version of your app saved as an APK file. If you've completed the Create a Mobile App with in5 & PhoneGap Build course, available here at Ajar Academy, you should have Google Developer login credentials as well as an APK file you created for a fictitious app that is a Guide to Channel Islands National Park. I'll be submitting this fictitious Channel Islands Guide app to Google Play in this course. Or you can follow along with an APK file for your own app that you've created. Okay, do you have everything you need? Let's begin.
