Data Center 1

Internet Advertising Background

- Different players:
 - Advertiser, Ad Firm, Publisher, Web-user
- Perspective of the Ad-firm (Chitika)
- Usually, Pay per click Model
- Advertiser and Ad-firm only care about clicks
- However, publisher also cares about impressions.

To Show or Not to Show

- To respect the interests of the publisher, ads are only shown to users that are likely to click on them
- However, too much filtering can lead to a large loss of ad-revenue (clicks)
- **The goal therefore, is to maximize ad-revenue subject to an efficiency constraint**

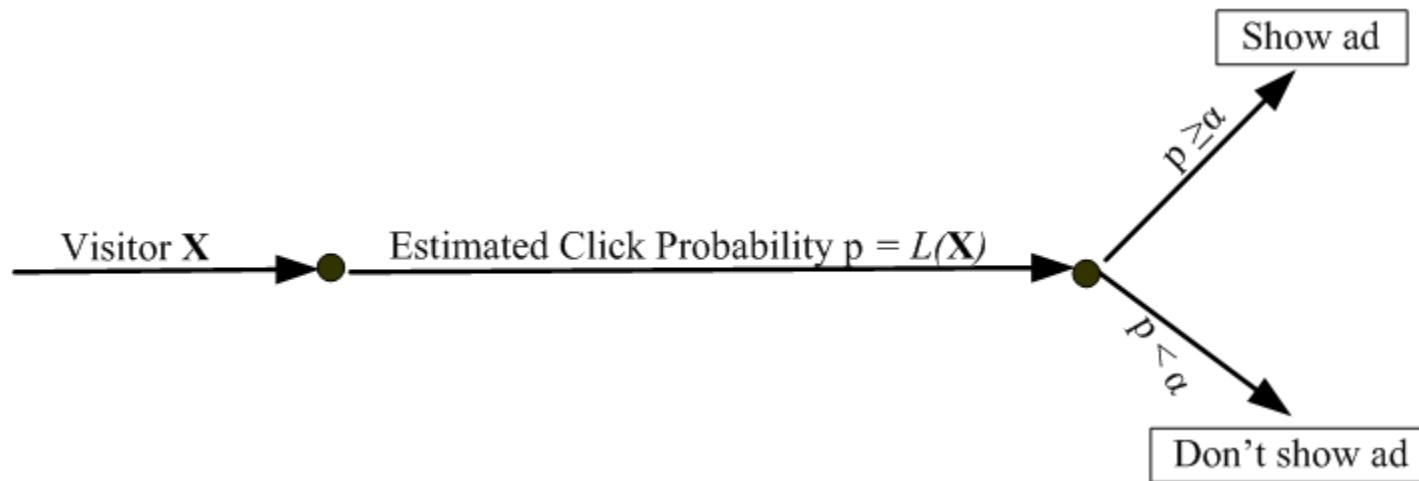

Solution: Show Ads to Select Users

Real-time Feedback

Data Analytics

- Developed a predictive model called “Prophet”
 - Patent filed
- More than 50 predictor variables
- Uses Logit Model

Click Probability = f (Predictor Variables)

Variable	Description	Possible Values
operating_system	Which operating system is being used by the visitor?	Linux, Android, Mac OS, Microsoft Windows, etc.
browser	Which browser is being used by the visitor?	Internet Explorer, Firefox, Chrome, Safari, Opera, etc.
search_engine	Which search engine is used by the visitor?	Google, Yahoo, Bing, etc.
btnSearch	Did the user click on the search engine button?	Yes, No
bad_speller	Is the visitor a bad speller?	Yes, No
search-string_type	Does the search string have local intent?	Yes, No
day	Day of the visit	Monday, Tuesday, . . . , Sunday
time	Time of the visit	Morning, Afternoon, Evening, Night
token_interest	Total number of clicks by this visitor in the past for ads on similar search strings	Integer
domain_token_interest	Total number of clicks by all the visitors in the past for ads on similar search strings	Integer
user_clicks	Total number of clicks by this visitor in the past	Integer
user_imps	Total number of impressions for this visitor in the past	Integer
height	Height of the ad unit	Numeric
width	Width of the ad unit	Numeric
loc_x	x-location of the ad	Numeric
loc_y	y-location of the ad	Numeric
CLICK	Dependent Variable Did the visitor click on the ad shown?	Yes, No

Table 1 There are more than 50 variables used in the Logit model; some of the important ones are shown here.

Variable	Description	Possible Values
operating_system	Which operating system is being used by the visitor?	Linux, Android, Mac OS, Microsoft Windows, etc.
browser	Which browser is being used by the visitor?	Internet Explorer, Firefox, Chrome, Safari, Opera, etc.
search_engine	Which search engine is used by the visitor?	Google, Yahoo, Bing, etc.
btnSearch	Did the user click on the search engine button?	Yes, No
bad_speller	Is the visitor a bad speller?	Yes, No
search-string_type	Does the search string have local intent?	Yes, No
day	Day of the visit	Monday, Tuesday, ..., Sunday
time	Time of the visit	Morning, Afternoon, Evening, Night
token_interest	Total number of clicks by this visitor in the past for ads on similar search strings	Integer
domain_token_interest	Total number of clicks by all the visitors in the past for ads on similar search strings	Integer
user_clicks	Total number of clicks by this visitor in the past	Integer
user_imps	Total number of impressions for this visitor in the past	Integer
height	Height of the ad unit	Numeric
width	Width of the ad unit	Numeric
loc_x	x-location of the ad	Numeric
loc_y	y-location of the ad	Numeric
CLICK	Dependent Variable Did the visitor click on the ad shown?	Yes, No

Table 1 There are more than 50 variables used in the Logit model; some of the important ones are shown here.

Variable	Description	Possible Values
operating_system	Which operating system is being used by the visitor?	Linux, Android, Mac OS, Microsoft Windows, etc.
browser	Which browser is being used by the visitor?	Internet Explorer, Firefox, Chrome, Safari, Opera, etc.
search_engine	Which search engine is used by the visitor?	Google, Yahoo, Bing, etc.
btnSearch	Did the user click on the search engine button?	Yes, No
bad_speller	Is the visitor a bad speller?	Yes, No
search-string_type	Does the search string have local intent?	Yes, No
day	Day of the visit	Monday, Tuesday, ..., Sunday
time	Time of the visit	Morning, Afternoon, Evening, Night
token_interest	Total number of clicks by this visitor in the past for ads on similar search strings	Integer
domain_token_interest	Total number of clicks by all the visitors in the past for ads on similar search strings	Integer
user_clicks	Total number of clicks by this visitor in the past	Integer
user_imps	Total number of impressions for this visitor in the past	Integer
height	Height of the ad unit	Numeric
width	Width of the ad unit	Numeric
loc_x	x-location of the ad	Numeric
loc_y	y-location of the ad	Numeric
CLICK	Dependent Variable Did the visitor click on the ad shown?	Yes, No

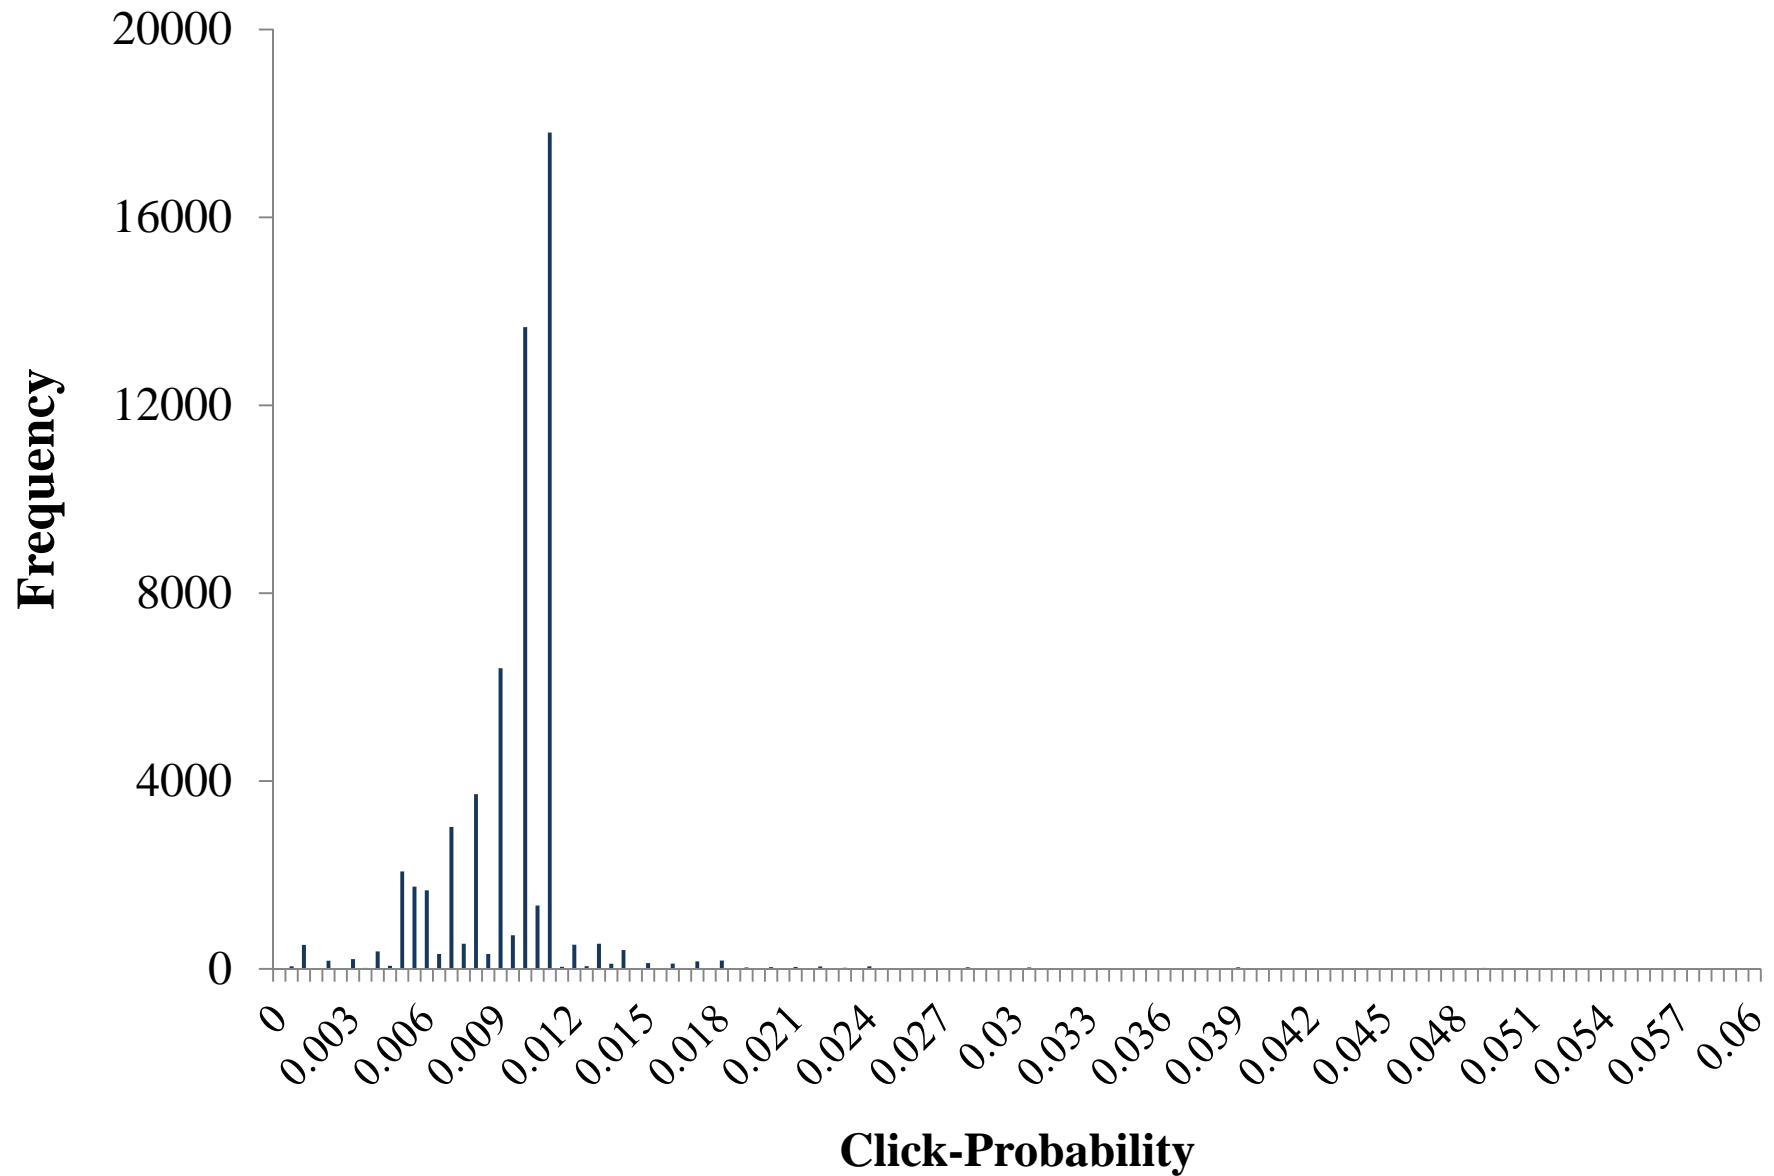

Table 1 There are more than 50 variables used in the Logit model; some of the important ones are shown here.

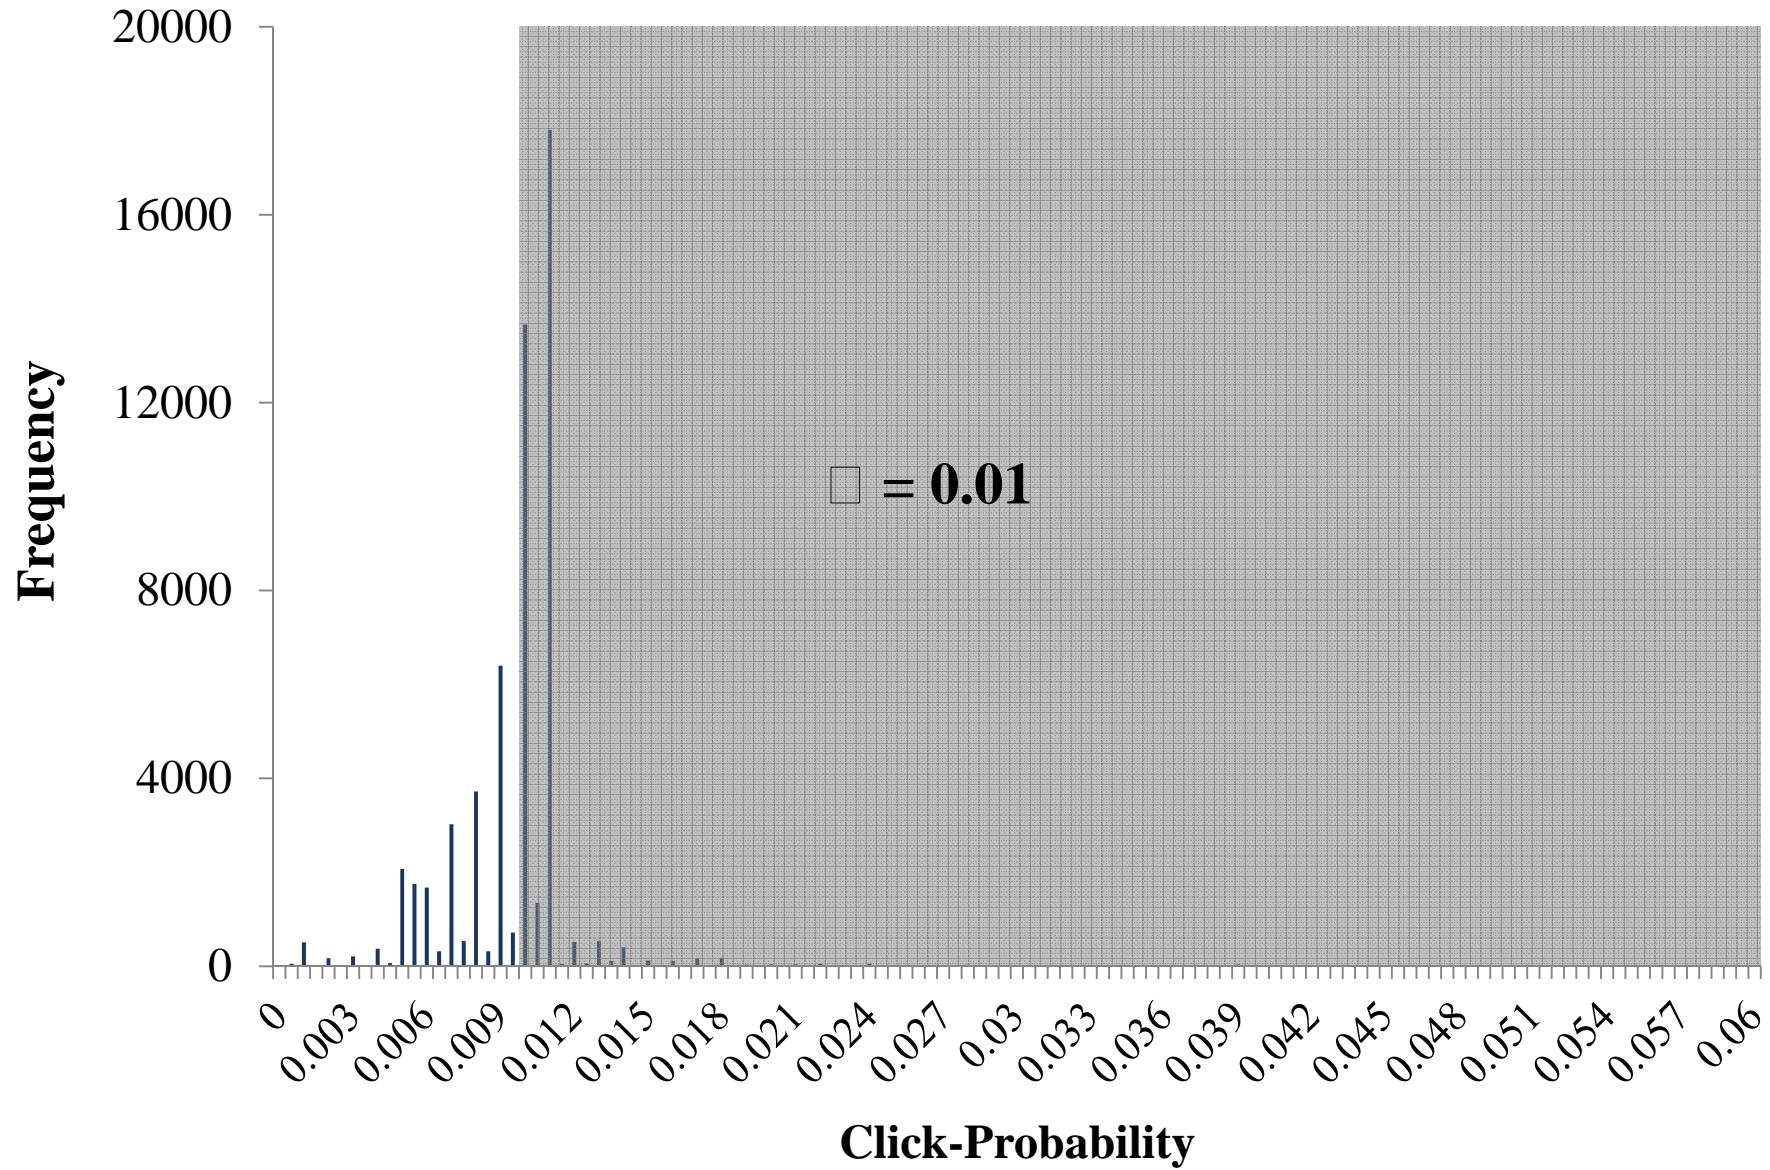

Variable	Description	Possible Values
operating_system	Which operating system is being used by the visitor?	Linux, Android, Mac OS, Microsoft Windows, etc.
browser	Which browser is being used by the visitor?	Internet Explorer, Firefox, Chrome, Safari, Opera, etc.
search_engine	Which search engine is used by the visitor?	Google, Yahoo, Bing, etc.
btnSearch	Did the user click on the search engine button?	Yes, No
bad_speller	Is the visitor a bad speller?	Yes, No
search-string_type	Does the search string have local intent?	Yes, No
day	Day of the visit	Monday, Tuesday, ..., Sunday
time	Time of the visit	Morning, Afternoon, Evening, Night
token_interest	Total number of clicks by this visitor in the past for ads on similar search strings	Integer
domain_token_interest	Total number of clicks by all the visitors in the past for ads on similar search strings	Integer
user_clicks	Total number of clicks by this visitor in the past	Integer
user_imps	Total number of impressions for this visitor in the past	Integer
height	Height of the ad unit	Numeric
width	Width of the ad unit	Numeric
loc_x	x-location of the ad	Numeric
loc_y	y-location of the ad	Numeric
CLICK	Dependent Variable Did the visitor click on the ad shown?	Yes, No

Table 1 There are more than 50 variables used in the Logit model; some of the important ones are shown here.

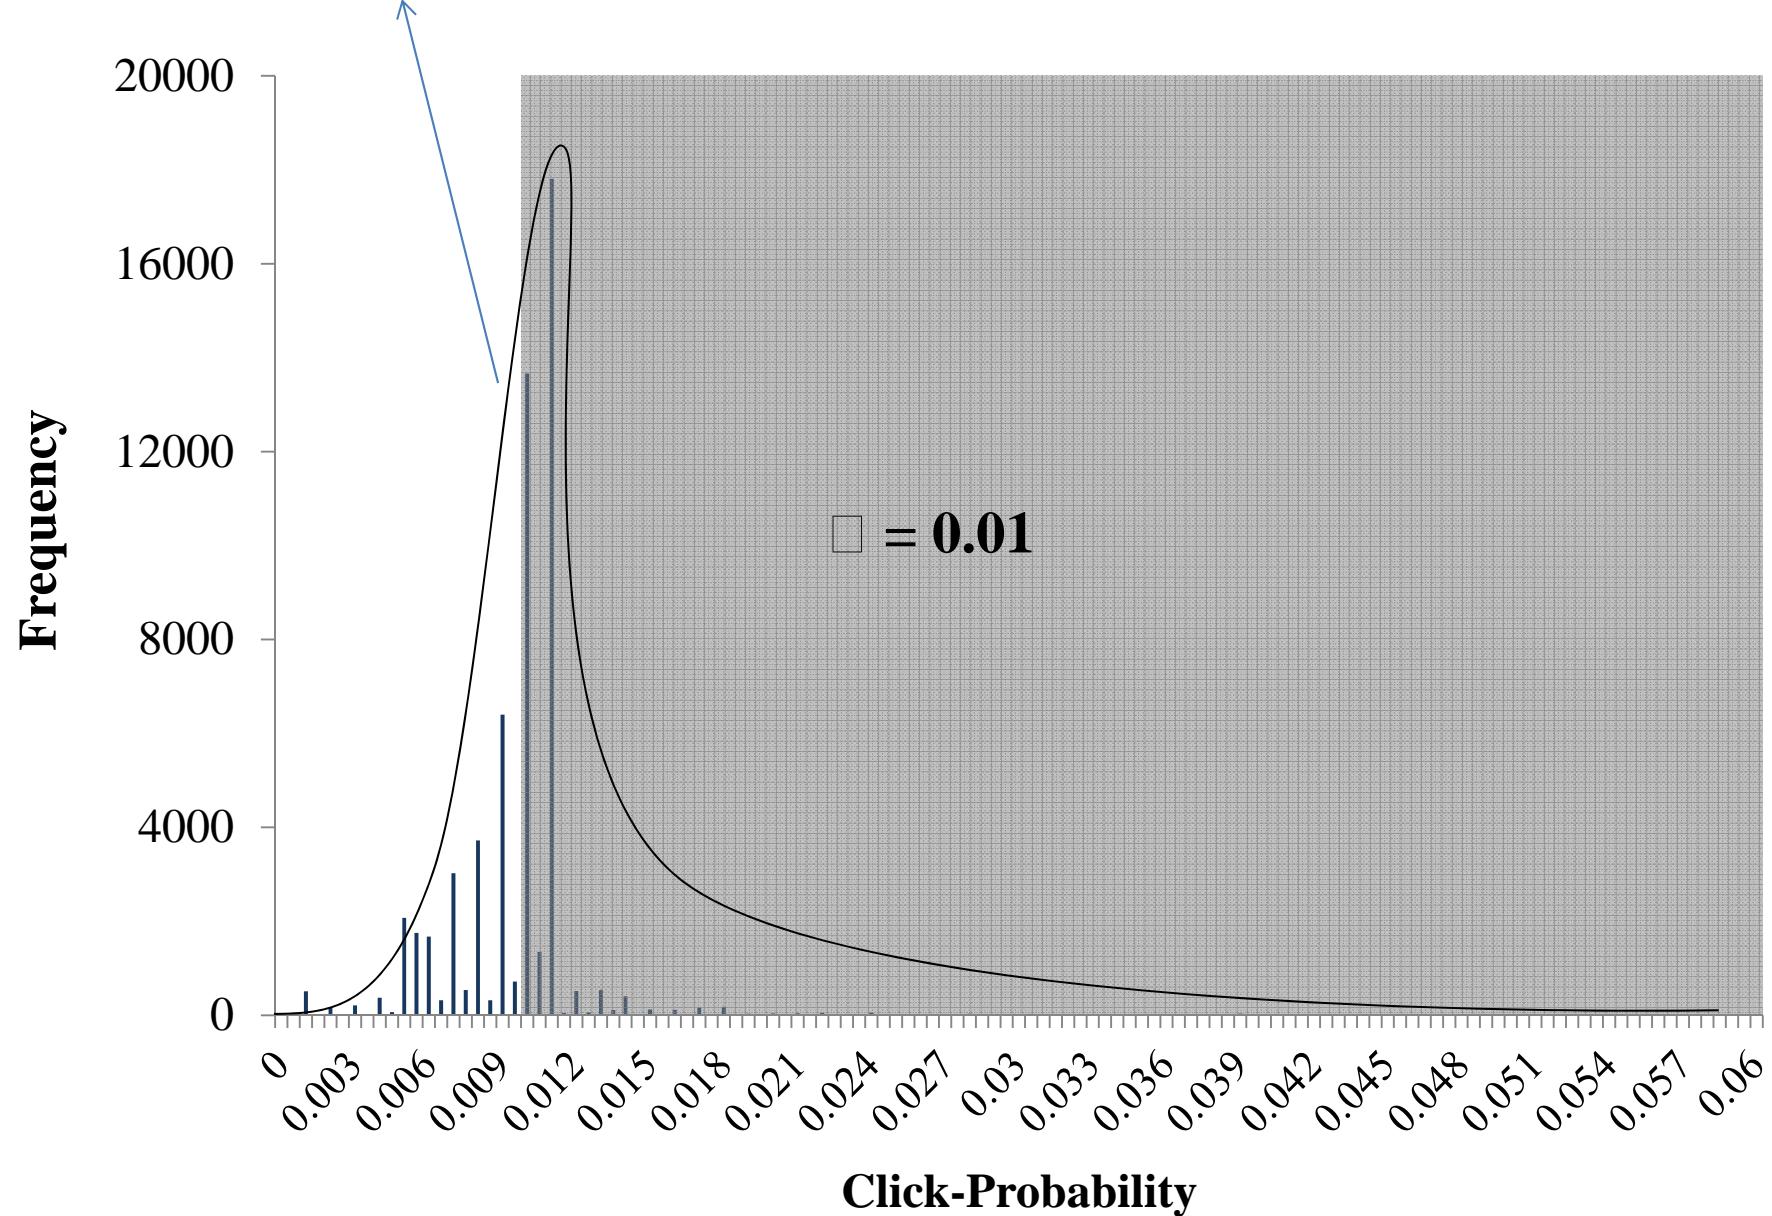

Variable	Description	Possible Values
operating_system	Which operating system is being used by the visitor?	Linux, Android, Mac OS, Microsoft Windows, etc.
browser	Which browser is being used by the visitor?	Internet Explorer, Firefox, Chrome, Safari, Opera, etc.
search_engine	Which search engine is used by the visitor?	Google, Yahoo, Bing, etc.
btnSearch	Did the user click on the search engine button?	Yes, No
bad_speller	Is the visitor a bad speller?	Yes, No
search-string_type	Does the search string have local intent?	Yes, No
day	Day of the visit	Monday, Tuesday, ..., Sunday
time	Time of the visit	Morning, Afternoon, Evening, Night
token_interest	Total number of clicks by this visitor in the past for ads on similar search strings	Integer
domain_token_interest	Total number of clicks by all the visitors in the past for ads on similar search strings	Integer
user_clicks	Total number of clicks by this visitor in the past	Integer
user_imps	Total number of impressions for this visitor in the past	Integer
height	Height of the ad unit	Numeric
width	Width of the ad unit	Numeric
loc_x	x-location of the ad	Numeric
loc_y	y-location of the ad	Numeric
CLICK	Dependent Variable Did the visitor click on the ad shown?	Yes, No

Table 1 There are more than 50 variables used in the Logit model; some of the important ones are shown here.

Good match with the Beta Distribution

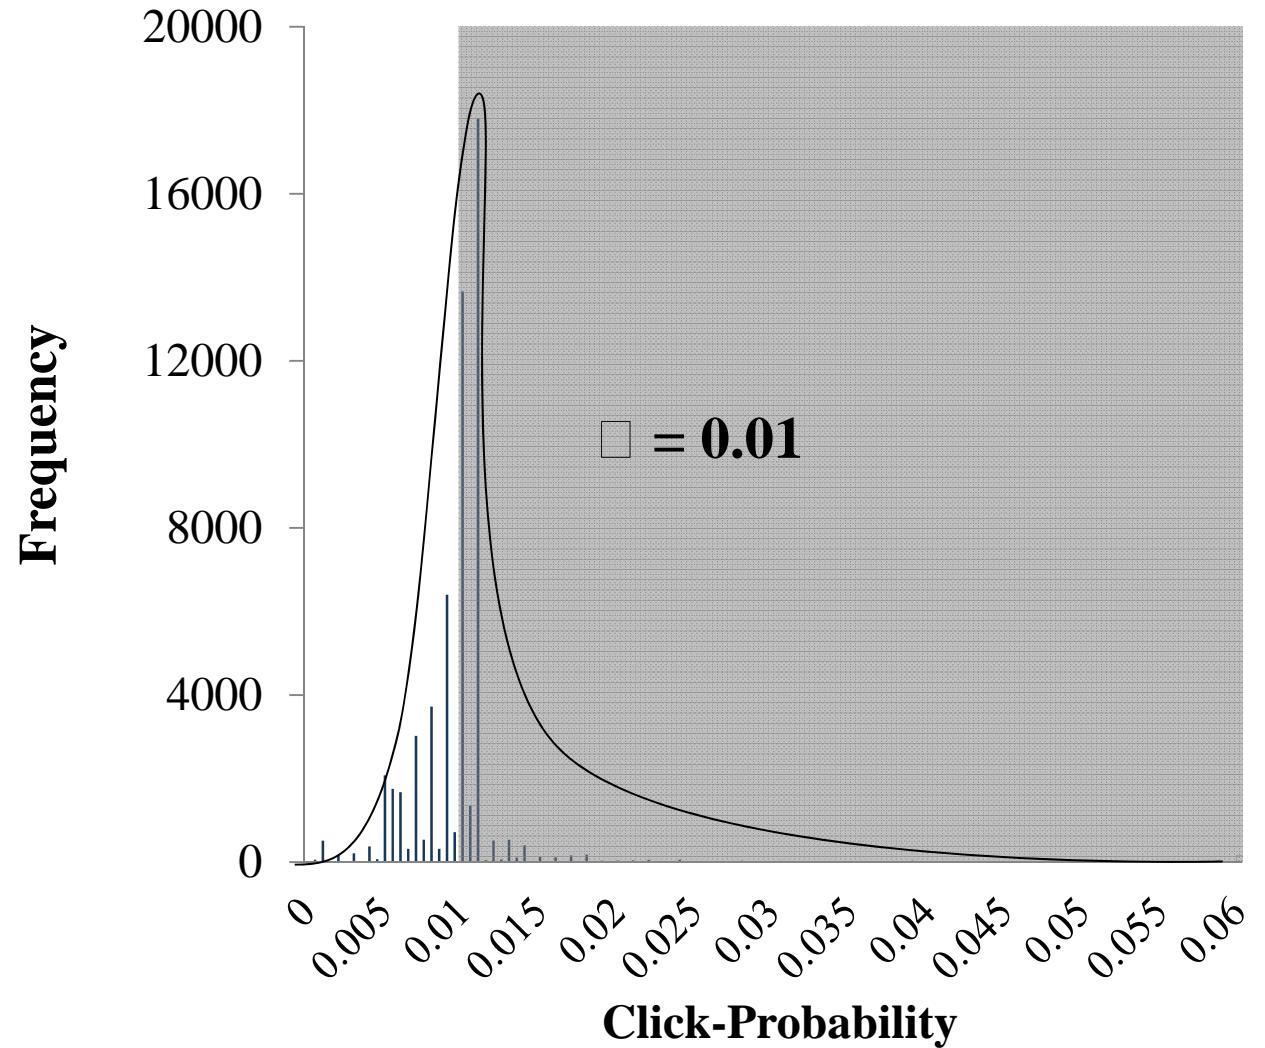

Impression probability

$$\gamma(\alpha) = \int_{\alpha}^1 f(p) dp$$

↓
Probability
of
impression

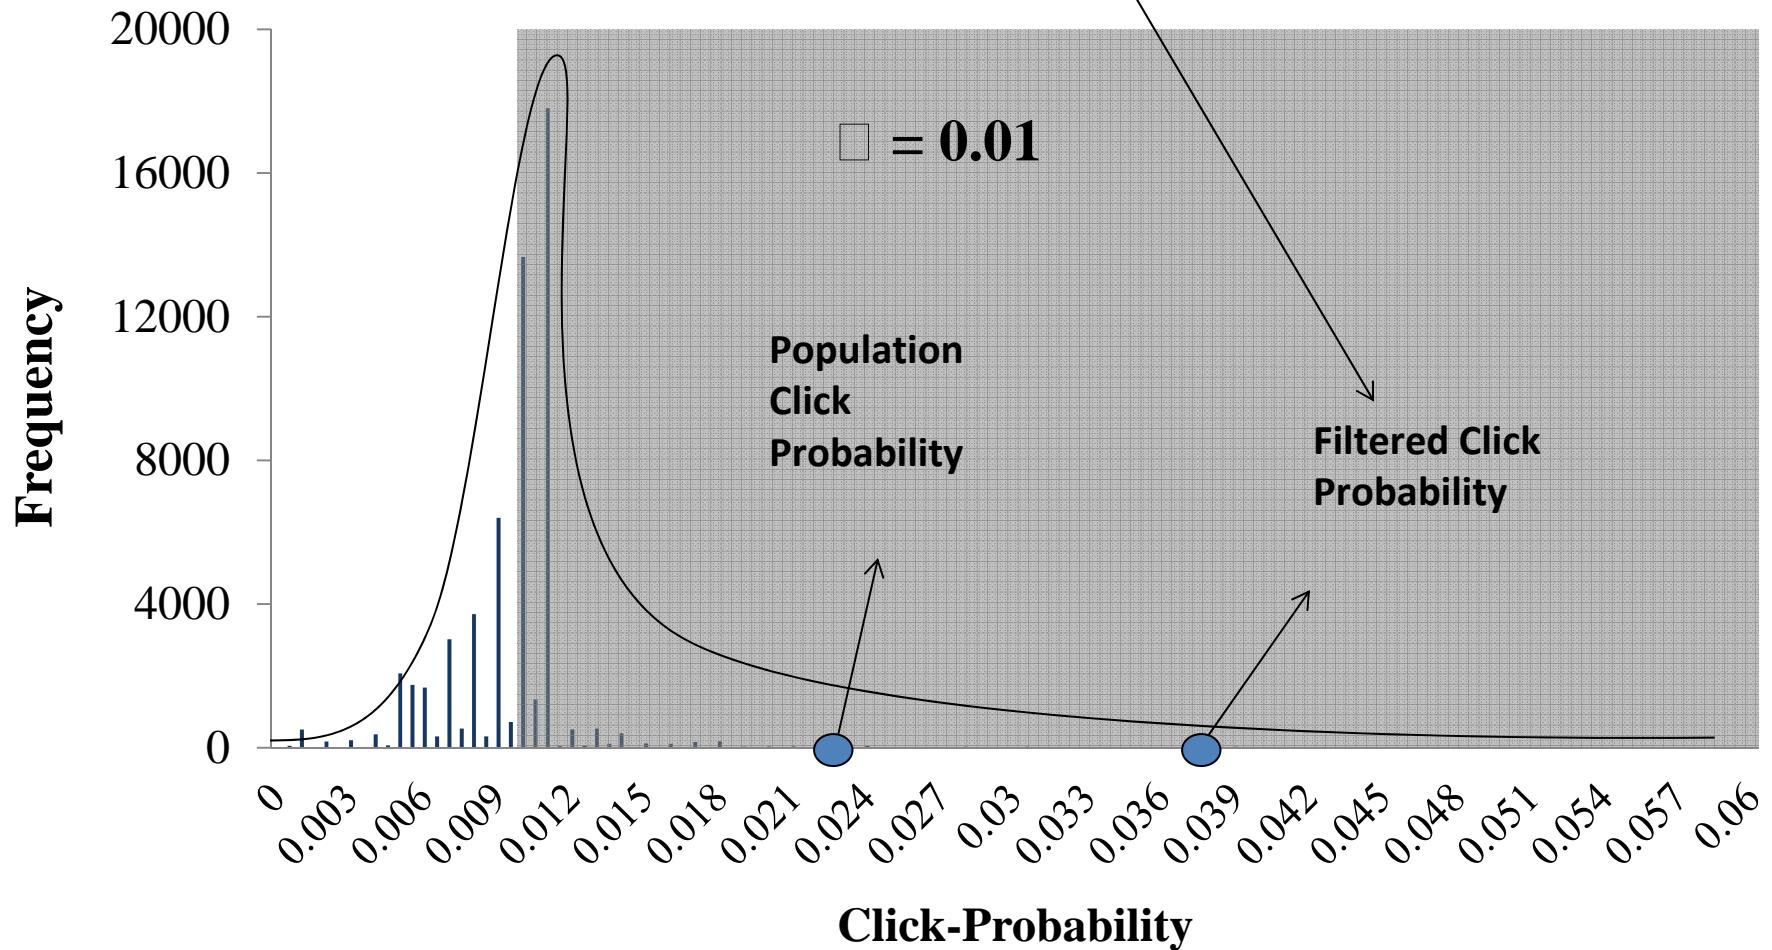

↓
Click
probability
distribution

**This is clearly
decreasing in
alpha**

Filtered Click Probability

$$\delta(\alpha) = \frac{\int_{\alpha}^1 p f(p) dp}{\gamma(\alpha)}$$

Filtered Click probability

$$\delta(\alpha) = \frac{\int_{\alpha}^1 p f(p) dp}{\gamma(\alpha)}$$

$$\frac{d\delta(\alpha)}{d\alpha} = \frac{- \left(\int_{\alpha}^1 f(p) dp \right) \alpha f(\alpha) + f(\alpha) \left(\int_{\alpha}^1 p f(p) dp \right)}{(\gamma(\alpha))^2}$$

$$\int_{\alpha}^1 \alpha f(p) dp < \int_{\alpha}^1 p f(p) dp$$

$\delta(\alpha)$ is increasing in α

Maximize Clicks subject to a click-through-rate constraint

$$\max_{\alpha} E[\text{Number of Clicks in the Planning Horizon } (\tilde{r})]$$

Subject to

$$E \left[\frac{\text{Total Number of Clicks } (r_0 + \tilde{r})}{\text{Total Number of Impressions } (m_0 + \tilde{m})} \right] \geq$$

Publisher's Click-Through-Rate Constraint (\square)

Evaluating the Objective Function

$$E[\tilde{r}] = \sum_{i=0}^{K\lambda} \sum_{j=0}^i j \Pr[\tilde{r} = j | \tilde{m} = i] \Pr[\tilde{m} = i]$$

Expected number of clicks Probability of generating j clicks from i impressions Probability of showing i impressions

$$\Pr[\tilde{m} = i] = \binom{K\lambda}{i} (\gamma(\alpha))^i (1 - \gamma(\alpha))^{K\lambda-i}$$

Probability of Impression

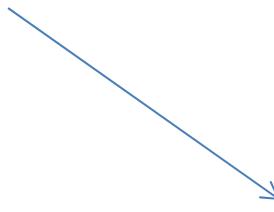

$$\Pr[\tilde{r} = j | \tilde{m} = i] = \binom{i}{j} (\delta(\alpha))^j (1 - \delta(\alpha))^{i-j}$$

Click probability given an impression

Evaluating the Objective Function

$$E[\tilde{r}] = \delta(\alpha) \sum_{i=0}^{K\lambda} i \binom{K\lambda}{i} (\gamma(\alpha))^i (1 - \gamma(\alpha))^{K\lambda-i} = K\lambda \delta(\alpha) \gamma(\alpha)$$

$$= K \square \int_{\alpha}^1 p f(p) dp$$

Thus objective is decreasing in α

Choose smallest α that meets
the click-through-rate constraint

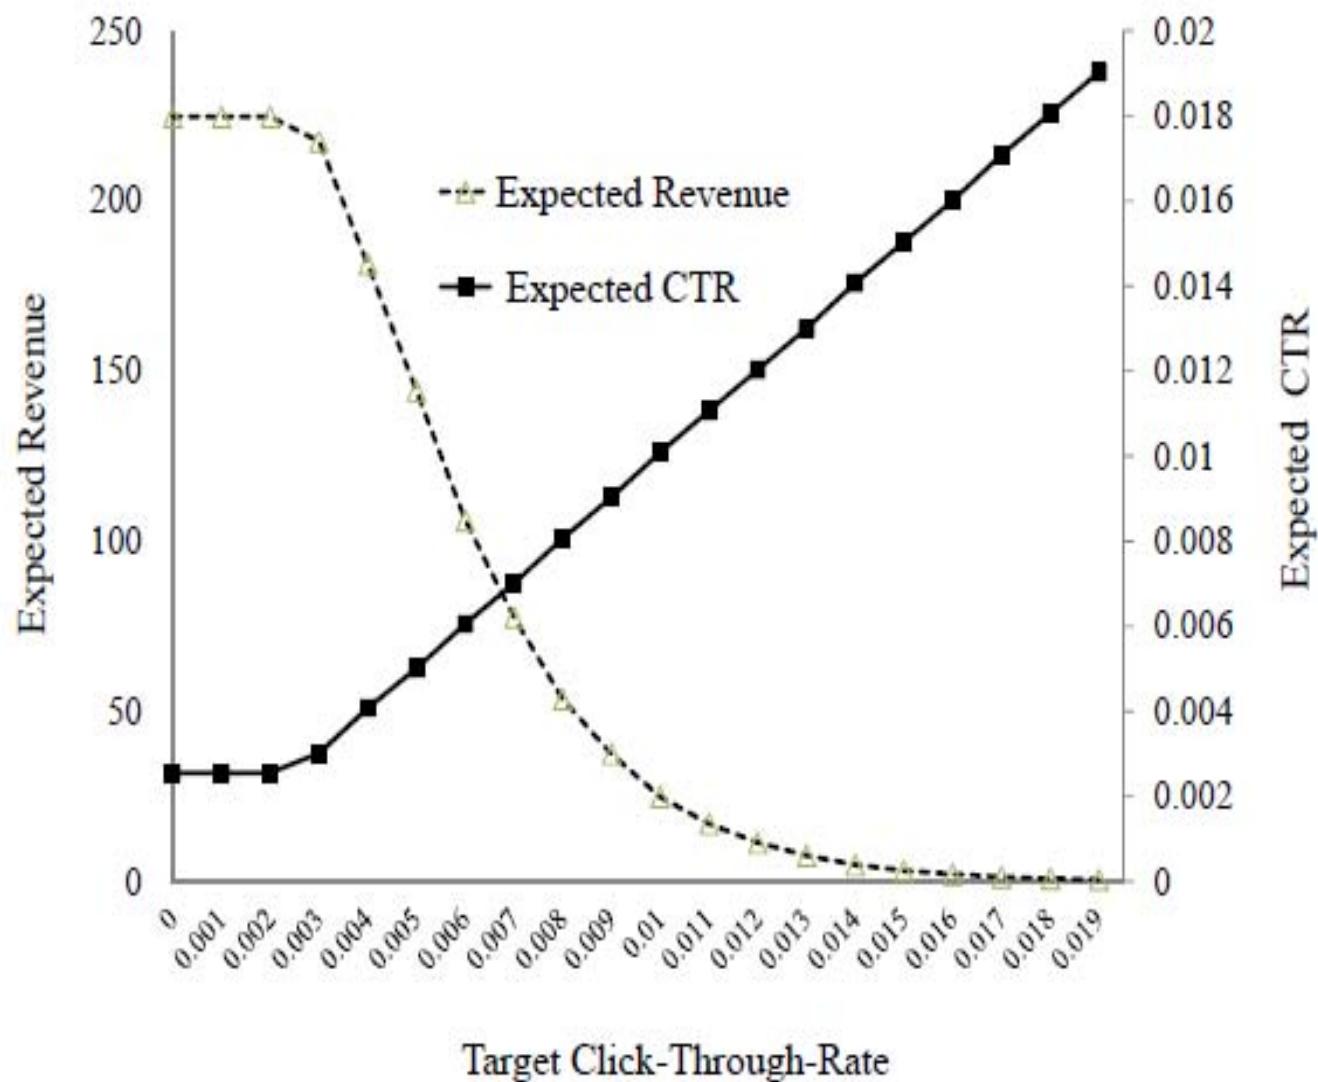

Figure 5 The slider provides a prediction of the revenue and the click-through-rate for any given ctr constraint.

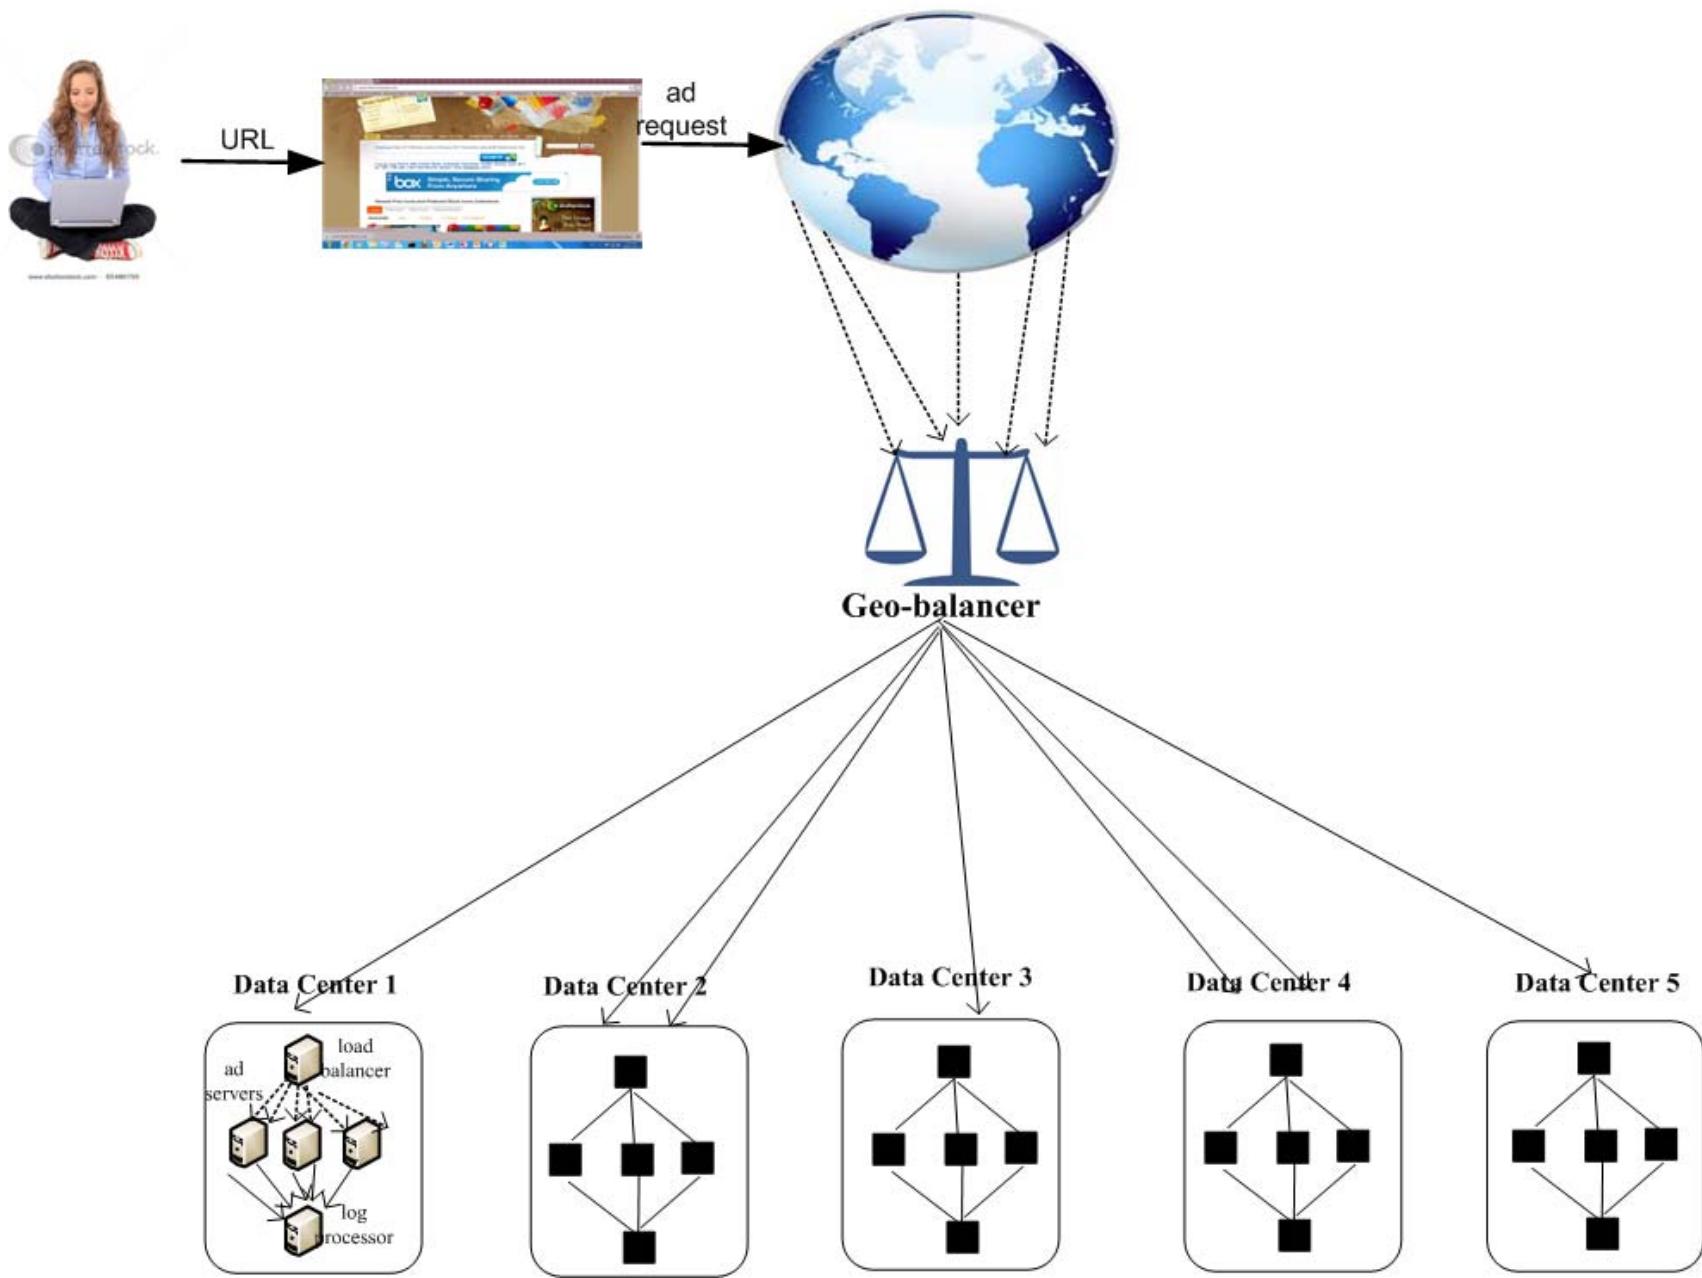

Static Versus Dynamic

Day	0	1	2	K
Static	0				
Dynamic	0				
					Actual Number of Impressions
Static	0				
Dynamic	0				
					Actual Number of Clicks
Static	0.0082				
Dynamic	0.0082				
					Decision Variable (α)

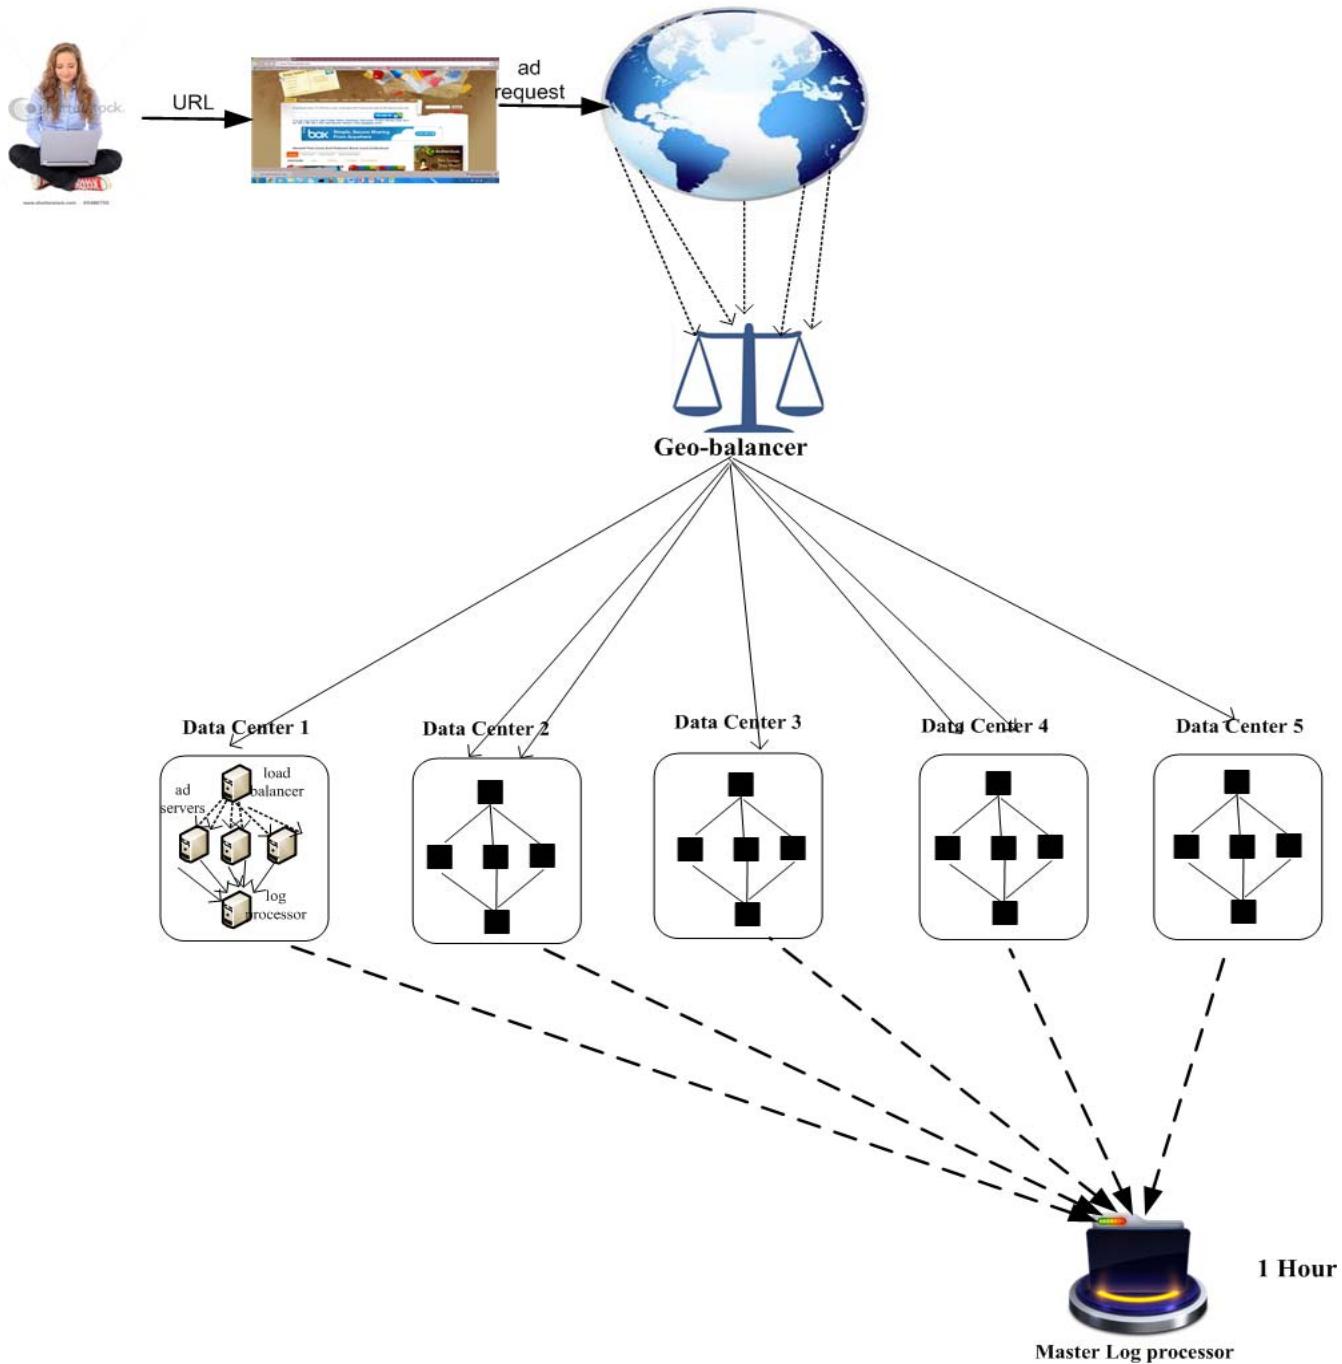

Evaluating the Constraint

$$E \left[\frac{r_0 + \tilde{r}}{m_0 + \tilde{m}} \right] \geq \eta$$

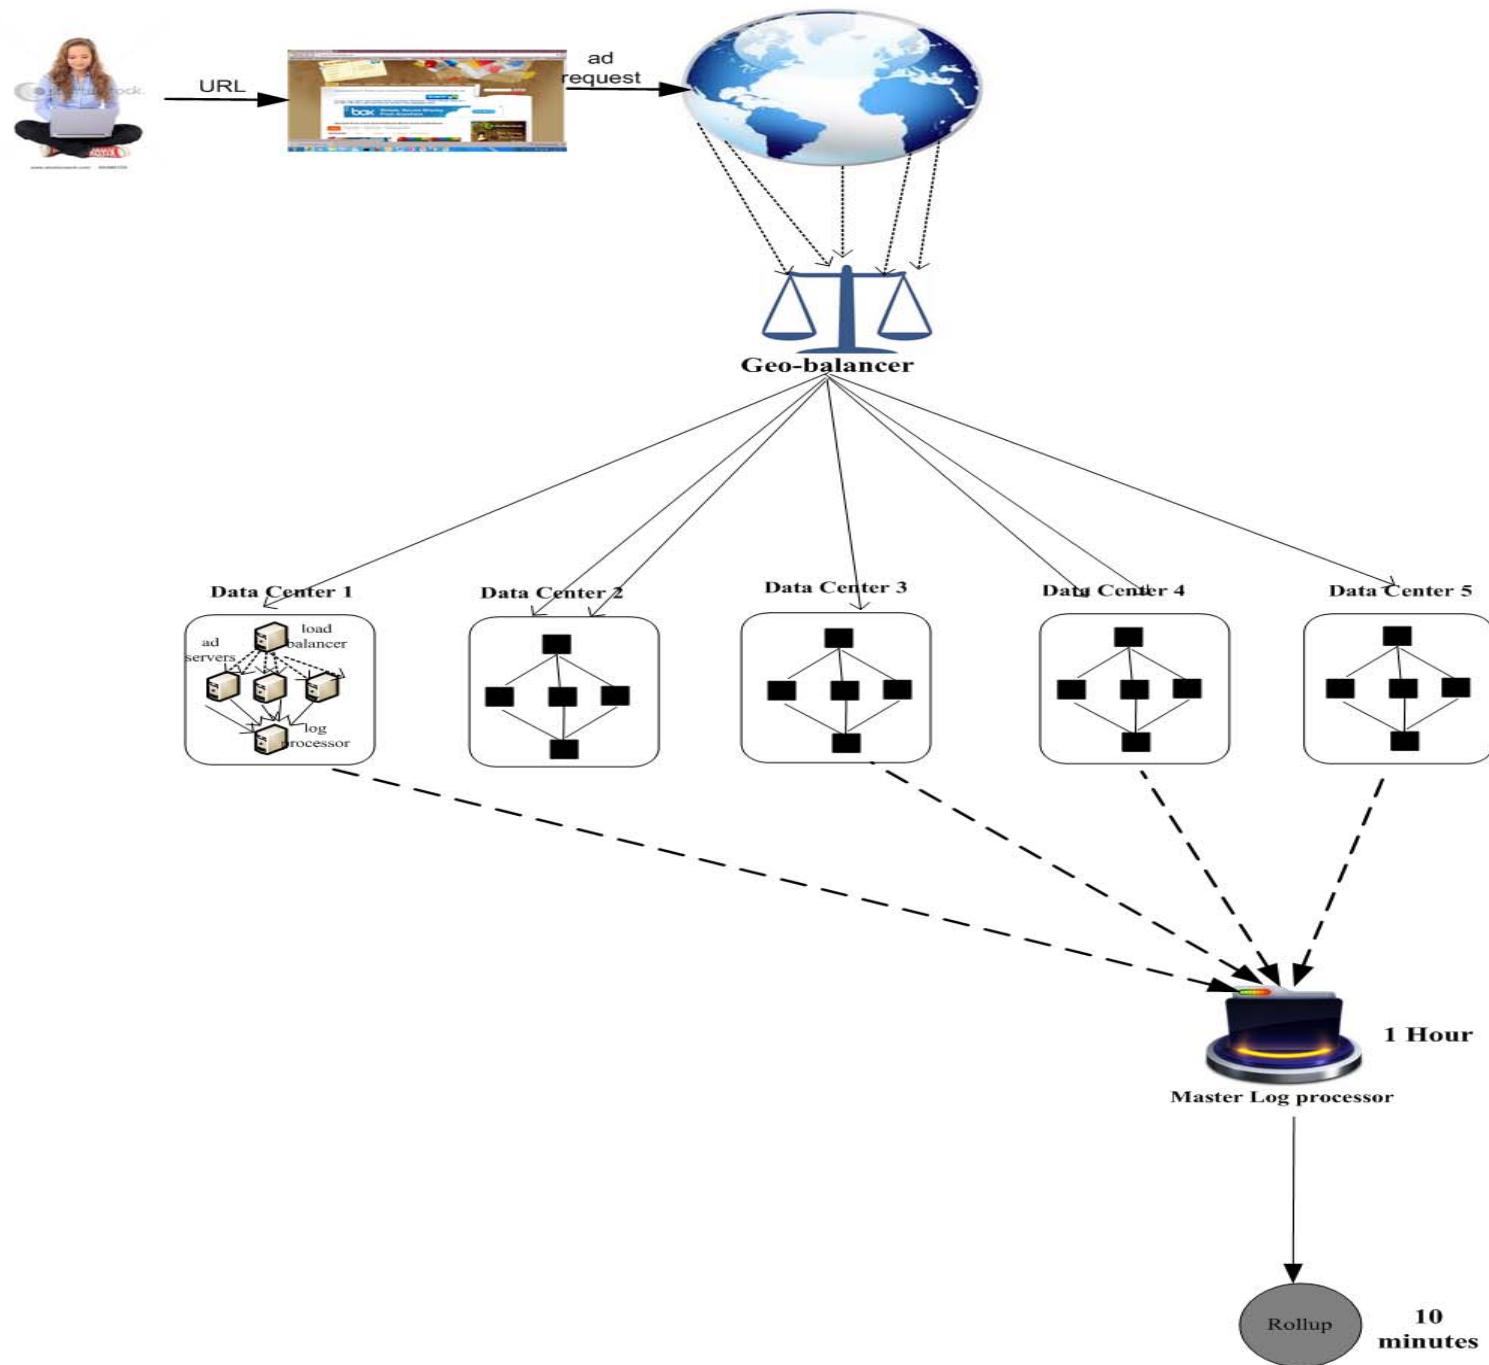

- Need to do a double summation where the number of evaluations can be in the order of the square of the number of arrivals in the rest of the horizon
- This number can be quite large
 - typically 30 times 100,000
- Also, the constraint needs to be calculated for each value of α
 - the lowest alpha that meets the threshold is what we need
- For the dynamic case, we need recalculate in each period

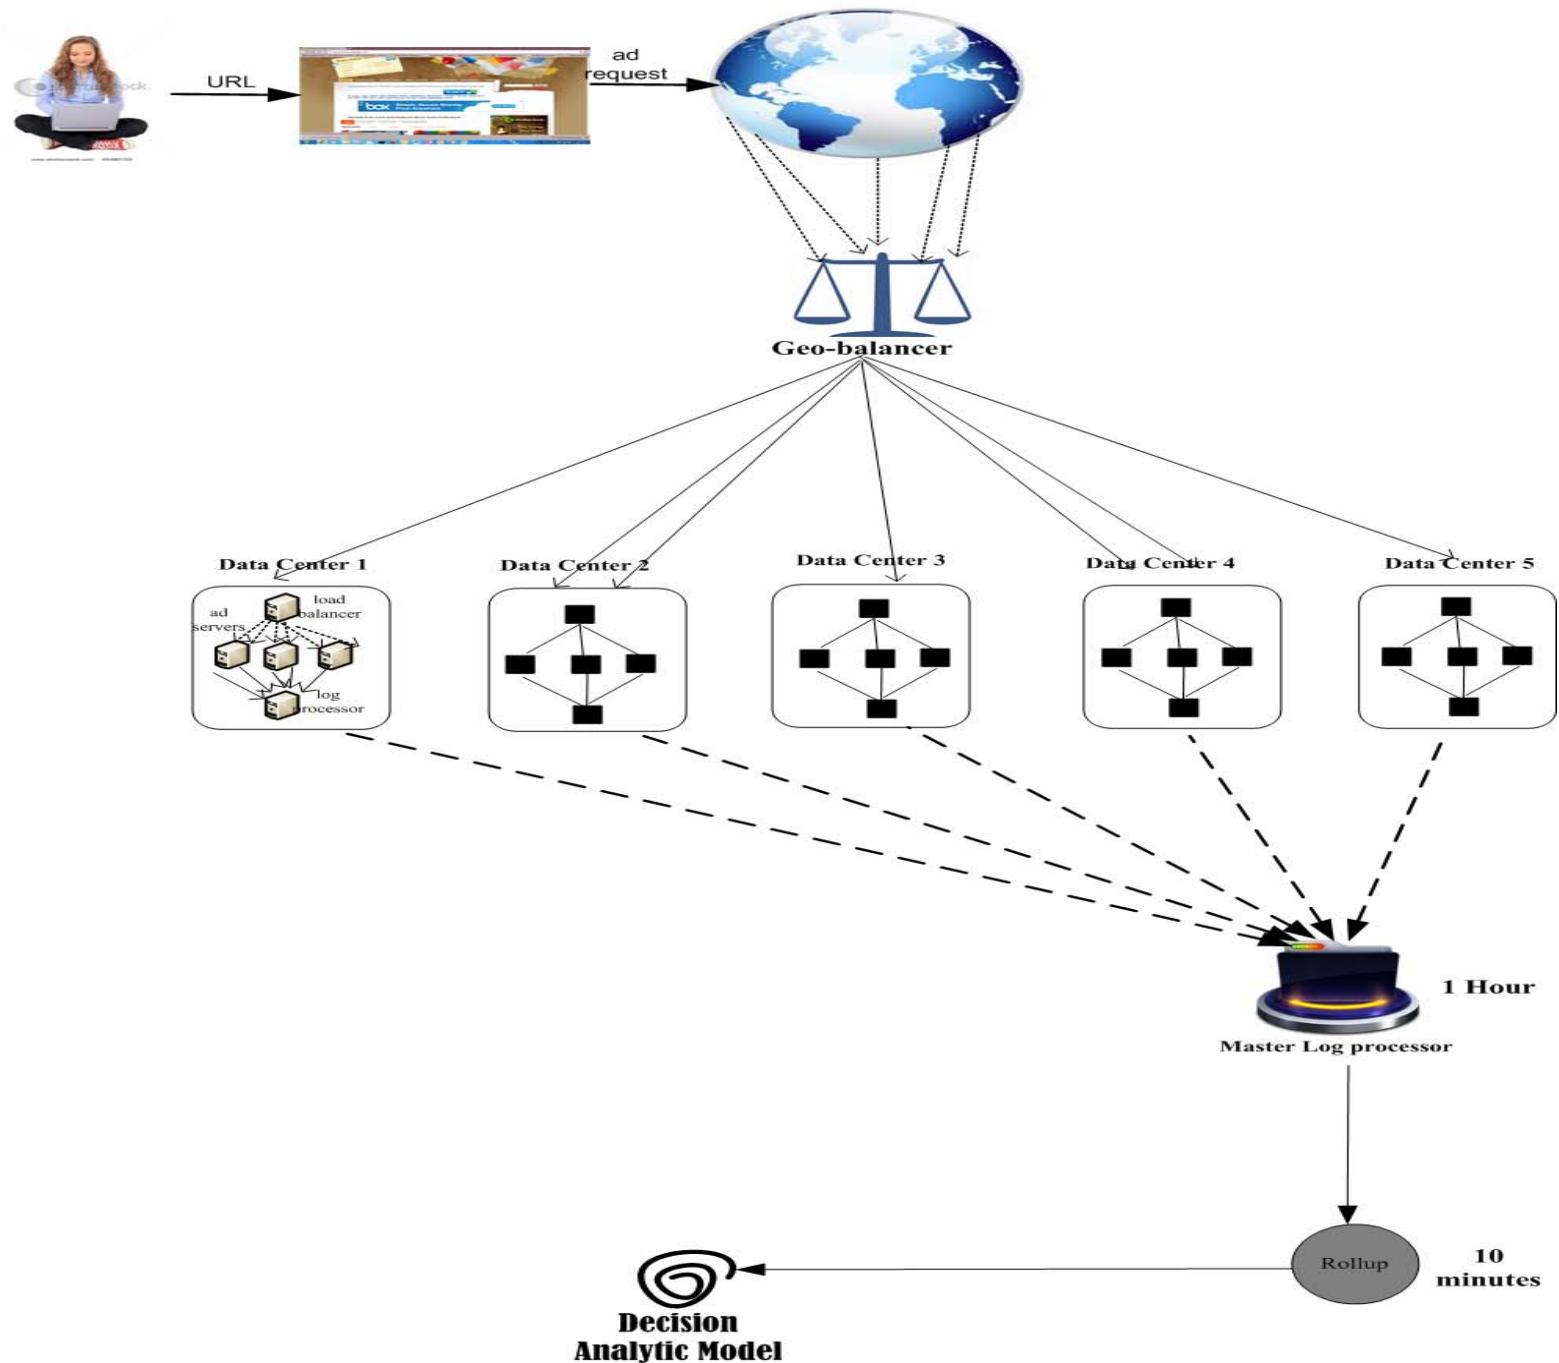

COPYRIGHT VIJAY S. MOOKERJEE

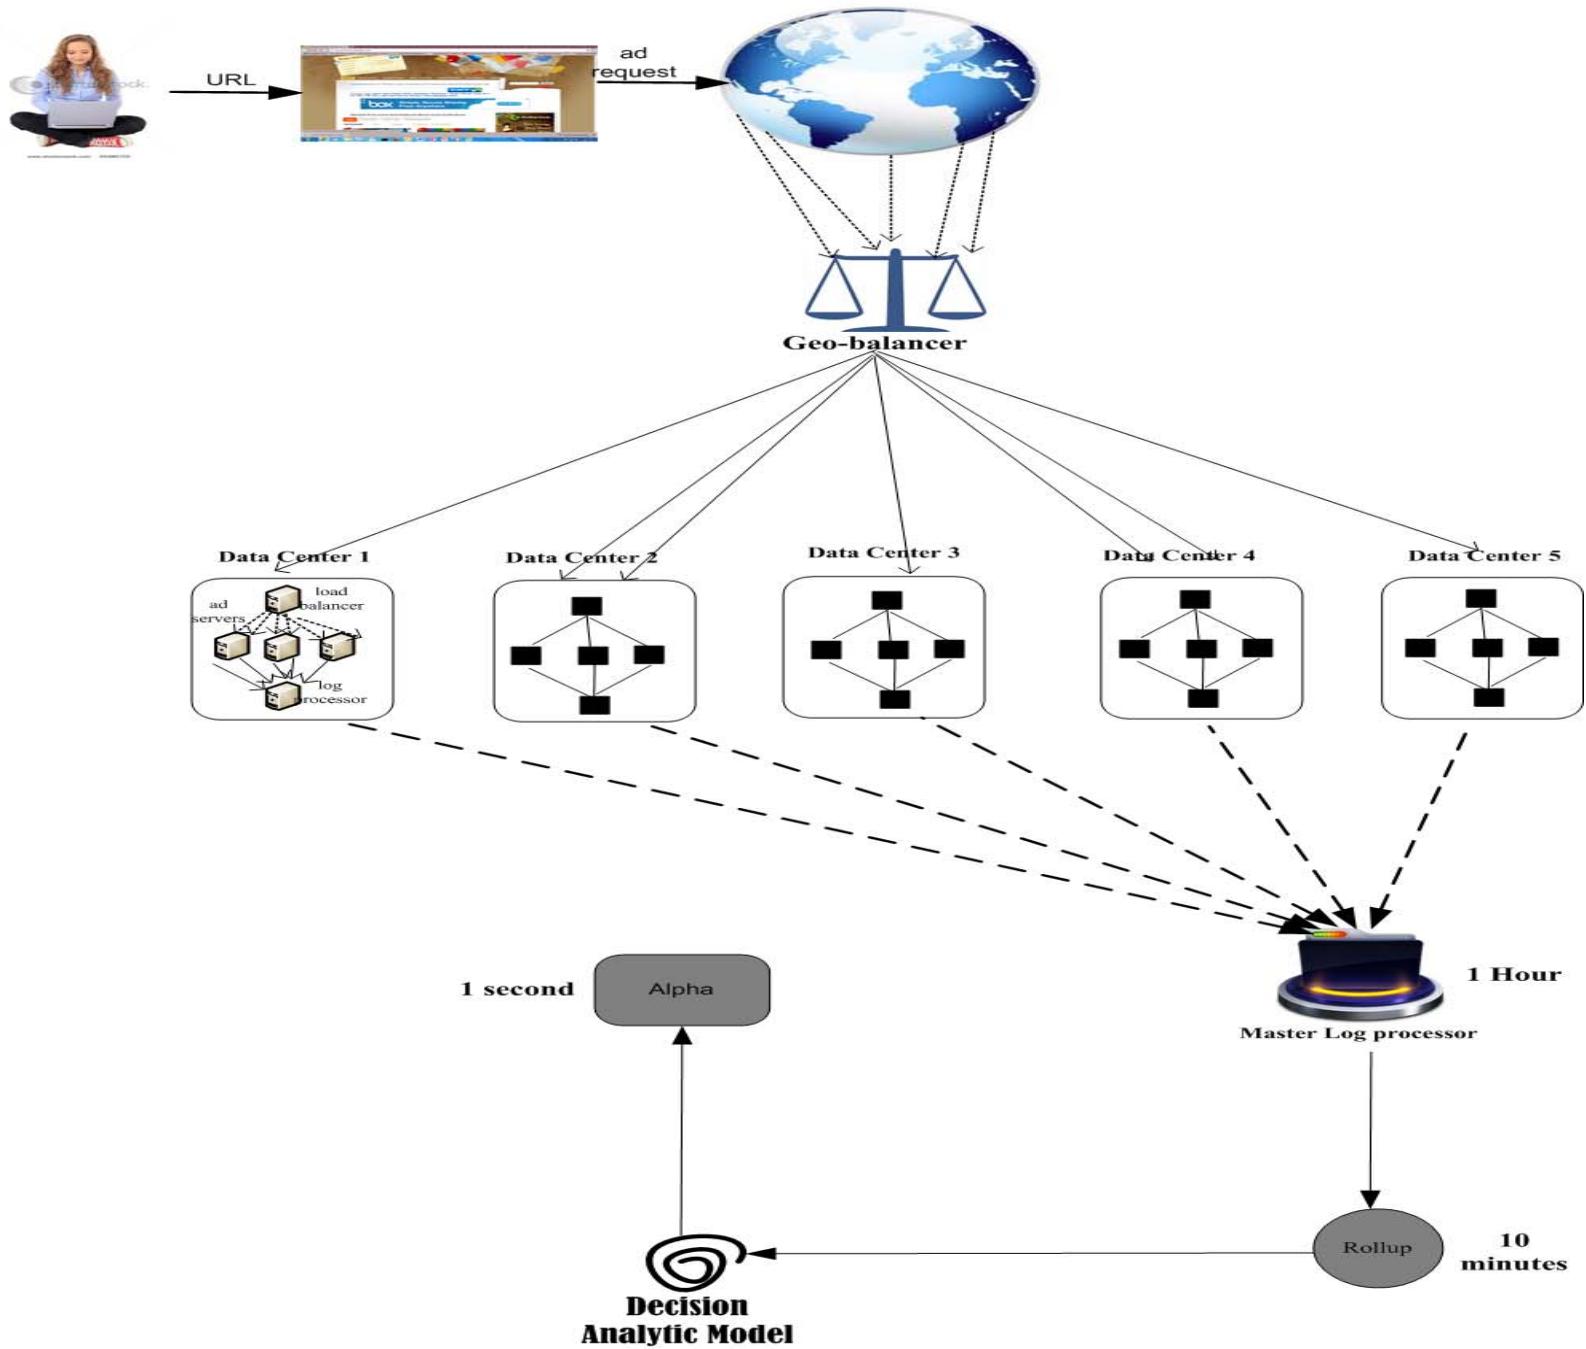

COPYRIGHT VIJAY S. MOOKERJEE

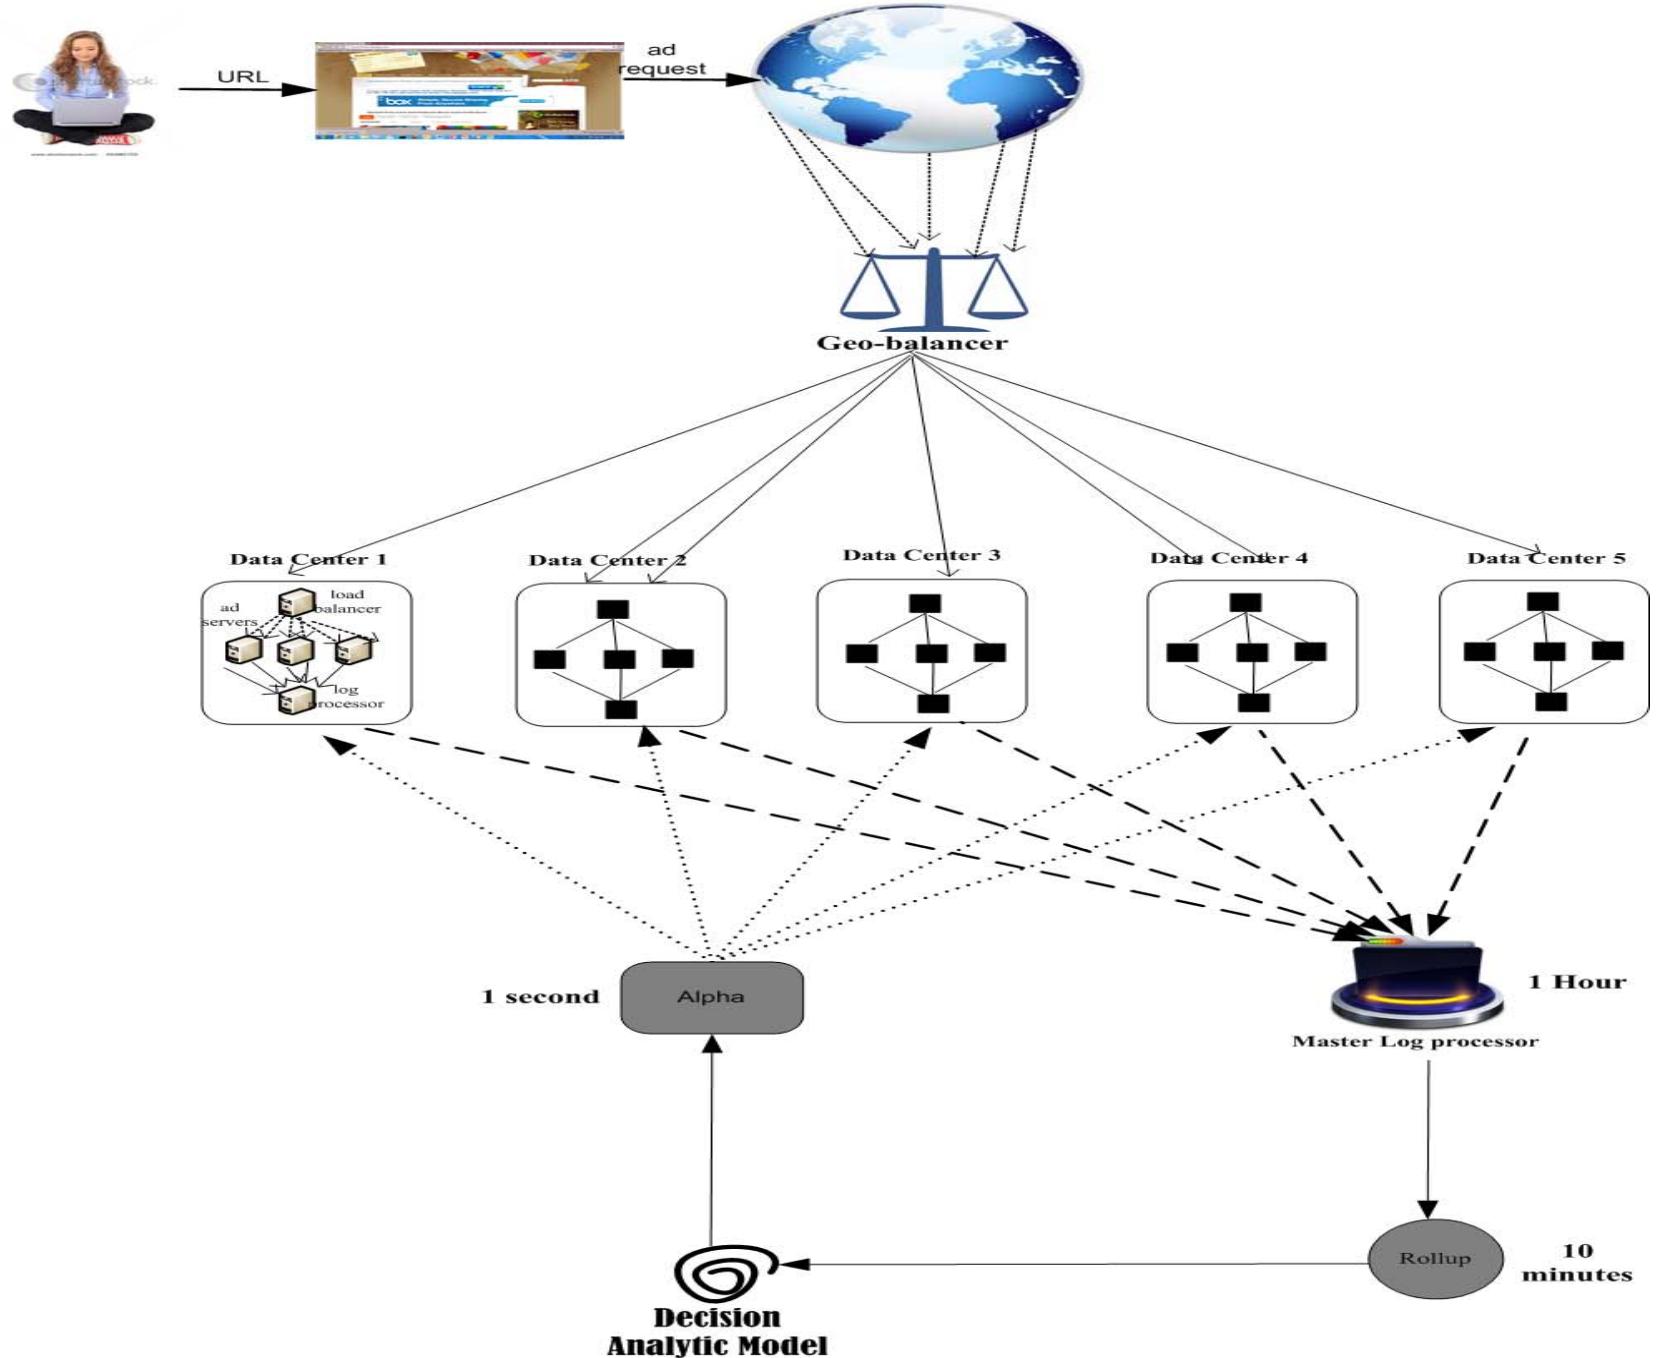

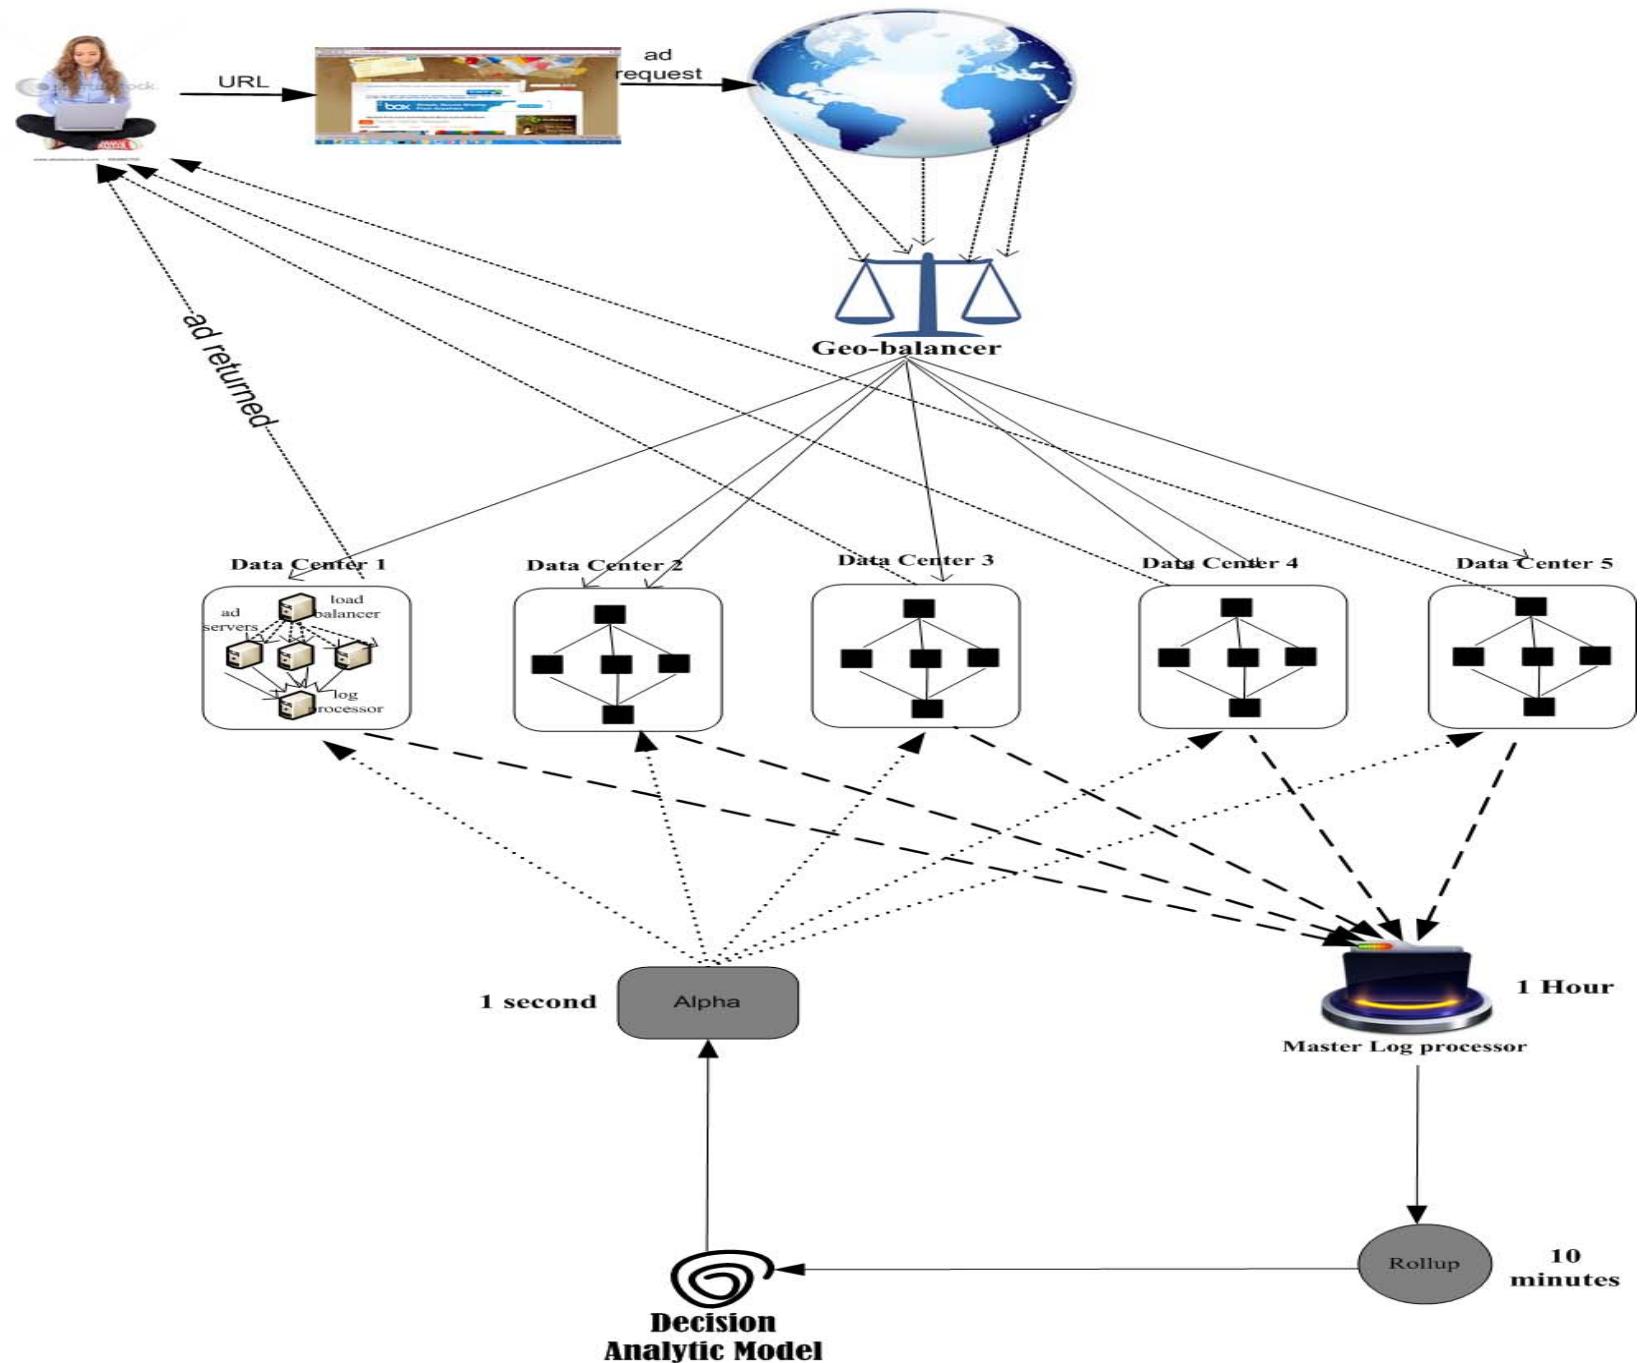

COPYRIGHT VIJAY S. MOOKERJEE

COPYRIGHT VIJAY S. MOOKERJEE

Evaluating the Constraint

- The dynamic approach is attractive
- However, it takes long to update even with fast computers.
 - >150,000 publishers
- So, an approximate method is indicated

Approximation

$$E \left[\frac{r_0 + \tilde{r}}{m_0 + \tilde{m}} \right]$$

Expectation of Ratio
(Exact)

Approximation

$$E \left[\frac{r_0 + \tilde{r}}{m_0 + \tilde{m}} \right] \approx \frac{r_0 + k\lambda\delta(\alpha)\gamma(\alpha)}{m_0 + k\lambda\gamma(\alpha)}$$

Expectation of Ratio
(Exact)

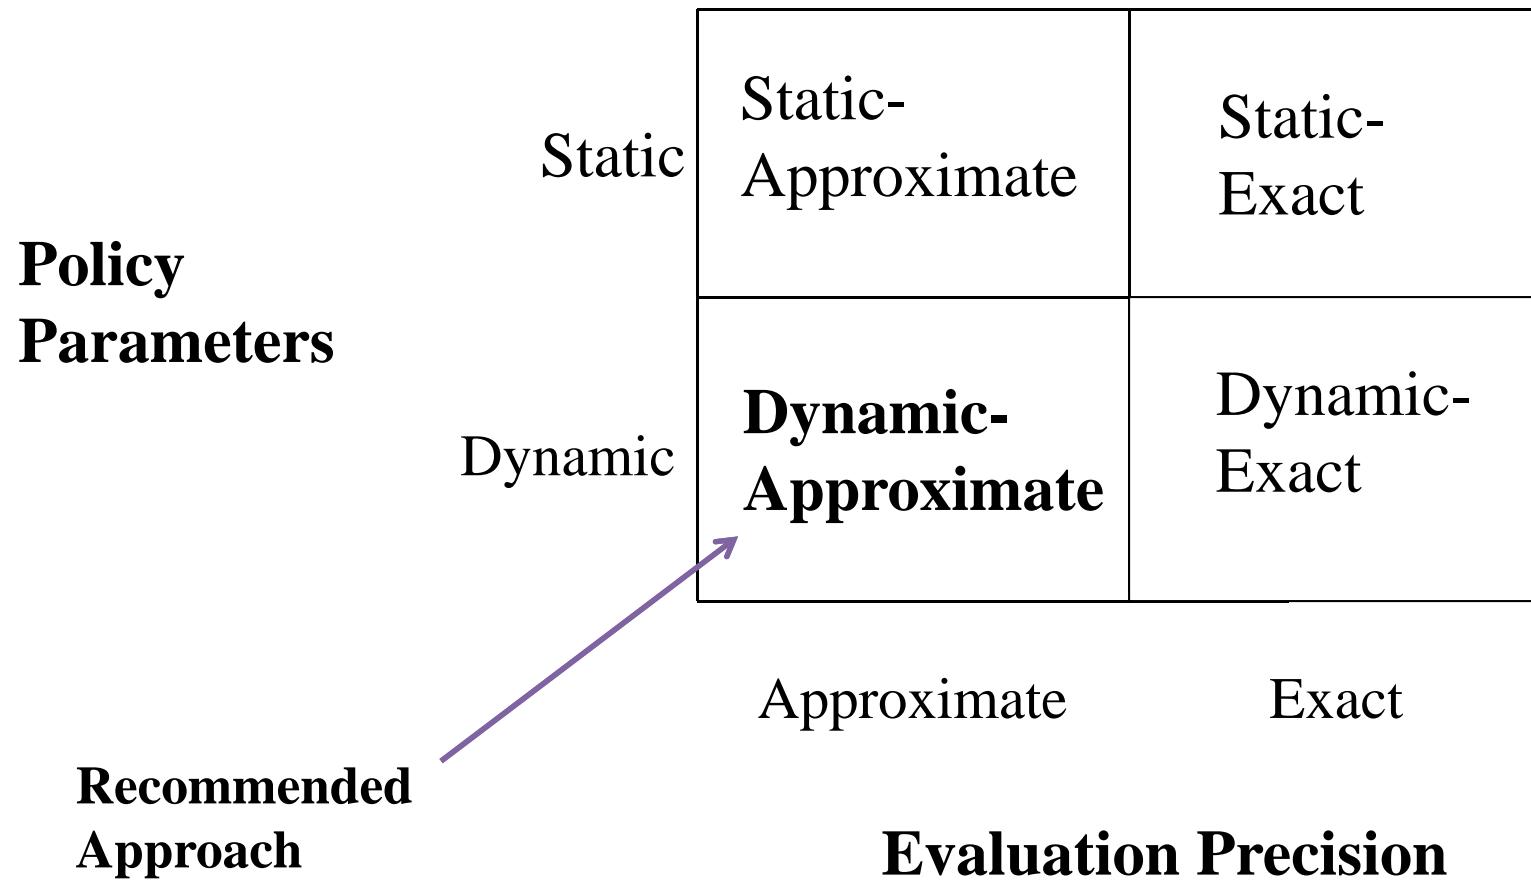

Ratio of Expectations
(Approximate)

- Second order Taylor's series with 2 variables

$$\begin{aligned} E \left(\frac{x}{y} \right) &= \frac{E(x)}{E(y)} + \frac{1}{2} \left[\frac{2COV(x,y)}{E(y)^2} + \frac{2V(y)}{E(y)^3} \right] \\ &= \frac{E(r_0 + r)}{E(m_0 + m)} + \frac{np_1 p_2 q_2}{(m_0 + np_2)^2} + \frac{np_2 q_2}{(m_0 + np_2)^3} \end{aligned}$$

- All but the first term vanish for large numbers of arrivals

Solution Approaches

Exact vs. Approximate

		Dynamic-Exact				Dynamic-Approximate				Static-Exact			Static-Approximate

Impact

- Implementation began in March 2010
- Increase in revenue for Chitika at the rate of about \$3,000 per day
- Based on the data collected between March 2010 and September 2010, the total increase in revenue was estimated to be in the order of \$1.2 million per year
- This revenue increase comes from Chitika being able to sign up more publishers under the Chitika Premium Program

Impact: Chitika Premium program

- Over the past year, Chitika was able to use its Premium program to partner with a very large ad aggregator in the United Kingdom
- As part of the trial process, Chitika was asked to demonstrate a click-through-rate of 0.015, or **1.5%**.
 - Our methodology was able to provide a click-through-rate of 0.0151 or **1.51%!!**
 - This accuracy won Chitika the contract and has contributed to a huge revenue increase for the company.

Impact: Chitika Select

- In December 2010, Chitika offered another service called Chitika **Select**.
- Publishers were offered the chance to expand the usage of Chitika ads with the assurance that the expanded coverage would not come at the expense of more than 25% dilution in the click-through-rate.
 - With our solution, Chitika was able to guarantee a click-through-rate.
- The Chitika Select offering gave the firm an additional 25% boost in revenue.

Venkat Kolluri, CEO Chitika

What revenue impact did Premium have on Chitika?

"Approximately 10% boost in revenue via winbacks. That means we were able to go back to ex-customers who had tried us in the past but decided to drop us."

"With premium we went back with a novel offer guaranteeing them that we will deliver a target click-through-rate when we choose to take an impression. This was basically an offer they couldn't refuse."

What revenue impact did Select have on Chitika?

“Select gave us an outright 25% boost in revenue.”

What value are big publishers seeing in the solution?

“All big publishers have only one goal: diversify and grow revenue without cannibalizing their existing revenue stream (mostly from the one major player in this space: Google).”

“Our ability to guarantee a lower bound on the click-through-rate essentially gave them a risk free alternative to test out.”

What long term impact will Prophet have on Chitika?

Long term impact? The foundation stone
for RTB. Period.
