

-- [Instructor] Hello, welcome to the Submit Your Mobile App to App Stores course. My name is Keith Gilbert, and I'll be your guide as you learn how to submit a mobile app to the Apple App Store, and Google Play.

In this course, I'll show you step-by-step how to navigate the specific process required by Apple and Google to create a store listing, and then successfully submit an app to be distributed on these stores. Both Apple and Google have completely different requirements and workflow. So first, I'll take you through the process of submitting an iOS app to the Apple App Store.

Then, I'll walk you through the process of submitting an app to the Google Play store. If you've completed the Create a Mobile App with in5 & PhoneGap Build course, here at Ajar Academy, you should have the necessary finished app files, and done some of the other basic groundwork required for these processes. Such as, joining the Apple and Google developer programs. If you haven't completed that course, just be forewarned that I'm going to assume you have knowledge of how to build an app, what an app ID is, and that sort of thing. Are you ready to begin?

Let's dive in and get started.
