Authorized Training
Global Training Provider

The main focus is on using the Foundational Components functionality in support of the development of your discovery, enterprise search and 360-degree solution needs.

- Understand the technical challenges Foundational Components helps you to solve, its architecture, and what major use cases it addresses.
- Become familiar with project, collections, and sources component capabilities along with the role they play in your enterprise discovery/search solutions.
- Become familiar with the crawling processing by configuring the crawler, converter and indexer collection component functionality.
- Become familiar with the query result configuration capability using the source, clustering, and display component functionality.
- Build an Application Builder discovery 360-degree view application using search indexed data.
